- **Warranty & Repair** options ensure you can purchase from us with complete confidence

Appliance solutions to help fit your specific needs.

Pharmacy and vaccine storage.

Sized from 1 to 18 cu.ft., the Accucold Pharma-Vac series includes solid and glass door refrigerators designed to operate between +2 to +8°C, with a +/-1°C variation. All units are equipped with password protected microprocessor digital controls and display a continuous temperature readout of the current and high/low temperatures. Access ports are included to accommodate additional monitoring equipment. These units include alarm functions for high/low temperature excursions, open-door warnings and power and sensor failure alert.

Medical and lab refrigerators.

From countertop choices to 49 cu.ft. units, Accucold's selection of life science refrigeration offers reliable solutions to cold storage. This equipment is purpose-built to maintain temperature stability, with user-friendly features for added peace of mind in highly sensitive storage applications. Our selection includes solid and glass door choices, as well as 32-inch high units for use in settings following guidelines for ADA compliance.

Medical and lab freezers.

Accucold's medical all-freezer line offers a variety of choices to meet a range of needs in the laboratory and medical marketplace. Our selection includes -20° and -25°C capable manual defrost units, as well as built-in frost-free freezers specially constructed for reliable cold storage and maximum customer convenience.

ADA-compliant refrigerators and freezers.

We carry a range of general purpose and medical refrigeration and freezer units designed for reliable storage. Each model is intended for a wide variety of basic storage applications, such as high-value vaccines, life science materials, and medical/clinical biologicals that require tighter temperature control and/or alarms, monitoring and backup. Each is ideally sized for various institutional settings, and follows all ADA guidelines.

Breast milk storage.

Our choice of breast milk storage units are designed to operate between 33° and 40°F for the proper storage of human milk. They also contain individual locking compartments that allow secure, separate storage so each mother has her own access system. Single-key override is included for staff to manage as needed, with audible/visual alarms for high/low temperature excursions. Ideal for office or hospital settings.

Break room appliances.

We offer a variety of cooking, cleaning and commercial products such as refrigerators/freezers, microwaves and more that may suit your healthcare facility's needs.
