

SWAGBOARD® SPECTRA MINI

Transform the Way You Travel

With the Spectra Mini from SWAGTRON®, your commute and style both get upgrades. The Spectra Mini is a powered penny board designed to change the way you move with advanced tech and an app for Android and iOS. This revolutionary skateboard's SenDeck features sensors built into the deck that detects posture changes while you ride. Ditch the daily hikes across campus and take a breather as you cruise to your next class.

The Mini board offers the best of both worlds – full electric and power assist options. The board's hub motor can give you an instant boost or switch to an assistance mode via the in-app "Pedal To Go" toggle. Kick it old school but with a twist, ride the Mini like a traditional cruiser skateboard and let electric power automatically kick in.

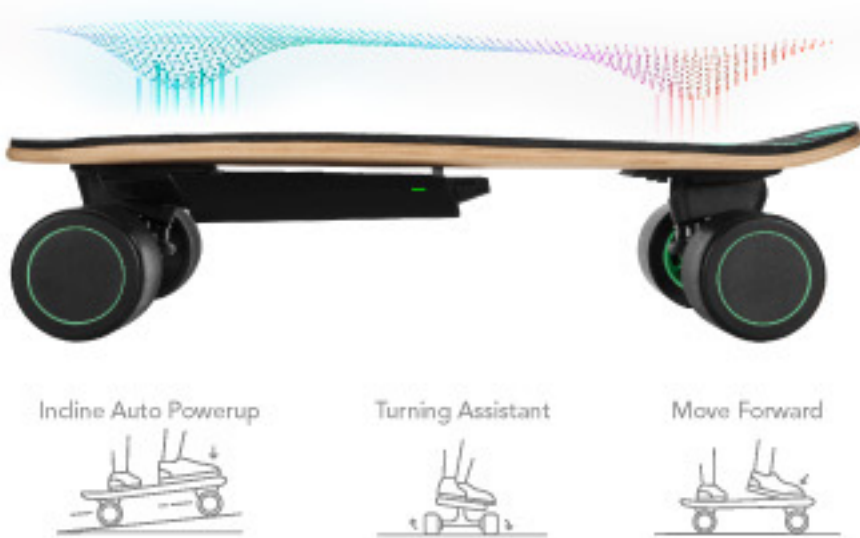

Downloading the eBoard Go app on your Android or iOS smartphone nets you extra features for your Mini board. Not only can you swap power types, you can also check out your board with your smartphone. Look over your travel info and check precise battery life so you know exactly when you need a little more juice. The magnetic charger connects in a snap and helps recharge your board during class or a quick study session. Hit the campus with the best, the Spectra Mini from SWAGTRON®.

Move Forward

AI Meets Skateboard

The Spectra Mini's state-of-the-art AI uses what's called a 3D Step Posture Control. The way you stand and move is detected by multiple sensors that actively help the board adjust. It learns your riding style and moves when you move.

Specifications

Ride the Way You Want

All-electric and power-assist are all yours, no need to choose. Toggle the in-app "Pedal To Go" mode on and ride how you want, full throttle or a mix of manual and electric power.

Always Travel Light

At a weight of about 9 pounds (definitely less than your roommate's cat), the Spectra Mini works well for a backpack* or carrying by hand.
*Spectra backpacks sold separately

Do More While You Ride

The Mini's front hub motor runs smoothly and helps recharge the board's battery during deceleration and rolling down inclines.
