

PREMIUM 4K ULED

Let's start with a quick round up. This is the best all-round TV. Hands down. Movies, gaming, sports... it'll handle anything you can throw at it and look great doing it (try not to actually throw stuff, it's just a figure of speech). No surprise when it's got 4K resolution, Quantum Dot Color, Dolby Vision HDR, 120Hz native panel, Full Array Local Dimming Zones, anti-glare panel and powerful 1,500 nit peak brightness. What does all that mean? It's like gazing at the sun melting into the Mediterranean Sea from Ibiza's coolest bars. But sitting on your couch. At home. Then for gaming, we added Variable Refresh rate, Auto Low Latency Mode and FreeSync Premium to make the most of the latest generation gaming platforms. Even if you don't know what half this stuff means, one look at the picture and you'll want it.

Hey Google. Android TV™ opens the door to more than 700,000 movies and shows, plus video streaming from Netflix, Prime Video, Disney+, Hulu, YouTube and more. All available using your voice as the remote control. No need to press buttons on the actual remote. Android TV™ also comes with Google Assistant, so you can find the latest blockbuster, check the score of the big game and even dim the lights* without leaving what you're watching. The U8G. It's the best of TV, instantly.

4K ULED™

Like 4K great, but better. The 65U8G has our exclusive ULED technologies. They boost color, contrast, brightness, motion... we could go on. It's the TV your old TV wants to be.

Quantum Dot Wide Color Gamut

See over one billion shades. Quantum Dot produces purer, richer, more brilliant and accurate colors than a regular LED TV. We could get into how it works. But it's a lot easier to say it makes every day look like the 4th of July.

Ultra Motion and 120Hz Native refresh rate

Ultra Motion removes the digital 'noise' that can affect moving objects. Whether it's a bird, a plane or the man of steel, everything you see is exceptionally clear. Blurred lines? Not on this TV, the 120Hz native refresh rate means smoother gaming with pictures that keep up with your play.

Dolby Vision™ • Dolby Atmos®

Dolby Vision HDR picture and Dolby Atmos sound are cinema technology for your home. They provide amazing realism you can see and hear in every scene.

IMAX Enhanced

IMAX Enhanced brings the cinema experience home. It combines digitally remastered 4K HDR content and DTS audio technologies with the best consumer products and streaming platforms. Built for people who want a more premier, at-home experience.

Peak Brightness/Full Array Local Dimming Zones

Let's start with the science. Screen brightness is measured in nits. One nit is the same brightness as one candle. So the higher the nit rating, the brighter the screen. The average TV is 250-350 nits. Anything over 500 nits is extremely good. This is up to 1,500 nits peak brightness across 360 local dimming zones. You get the picture. A picture that's brighter and perfectly lit in any light condition.

Game Mode Pro

All the most advanced gaming tech, all in this TV. HDMI 2.1 inputs recognize gaming sequences to automatically adjust settings for smooth, uninterrupted play. The automatic low-latency mode (ALLM), variable refresh rate (VRR) and FreeSync minimize input lag, screen jitter, and frame tearing. So your gaming looks sick even if you suck.

Hands Free Voice Control

Put down the remote. Change the channel, find the latest movie, stream your favorite video and more with your voice. The quicker, easier way to find whatever you want to watch.

Voice Remote

The backlit voice control makes controlling your TV easier. Open apps, turn the volume up or down, search for your favourite shows. And if the actual remote goes missing, use the buttons on the TV to activate 'Find My Remote'. Five bucks says it's down the back of the couch.

Google Assistant

The Google Assistant* is built into Android TV. Tell it to turn on the lights, change the thermostat, add stuff to your grocery list, or just play that video of your friend falling over for the millionth time. And with universal search, you can even get recommendations with Android TV.

Works with Alexa

The U8G works with Alexa through any of your Alexa-enabled devices. Just ask Alexa to switch the TV on or off, change channels and lots more.

TECHNICAL SPECIFICATIONS

DIMENSIONS/WEIGHT	
TV Dimensions (without the stand)	57.1 × 33.1 × 4.1 in
(with the stand)	57.1 × 35.6 × 13.6 in
TV Stand Width	35.4 × 13.6 in
