CODIJY

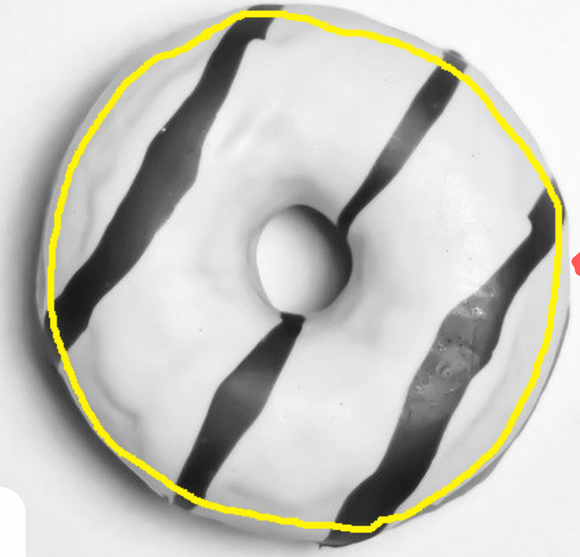
Select Pen tool

Pick a color

Draw a stroke.
Keep close to the edge.



Avoid stepping across the boundary.

Generate result

CODEJY

When you add a color to a single object, it spreads over the whole picture.

To enable **border detection**, add color to the neighbouring areas.

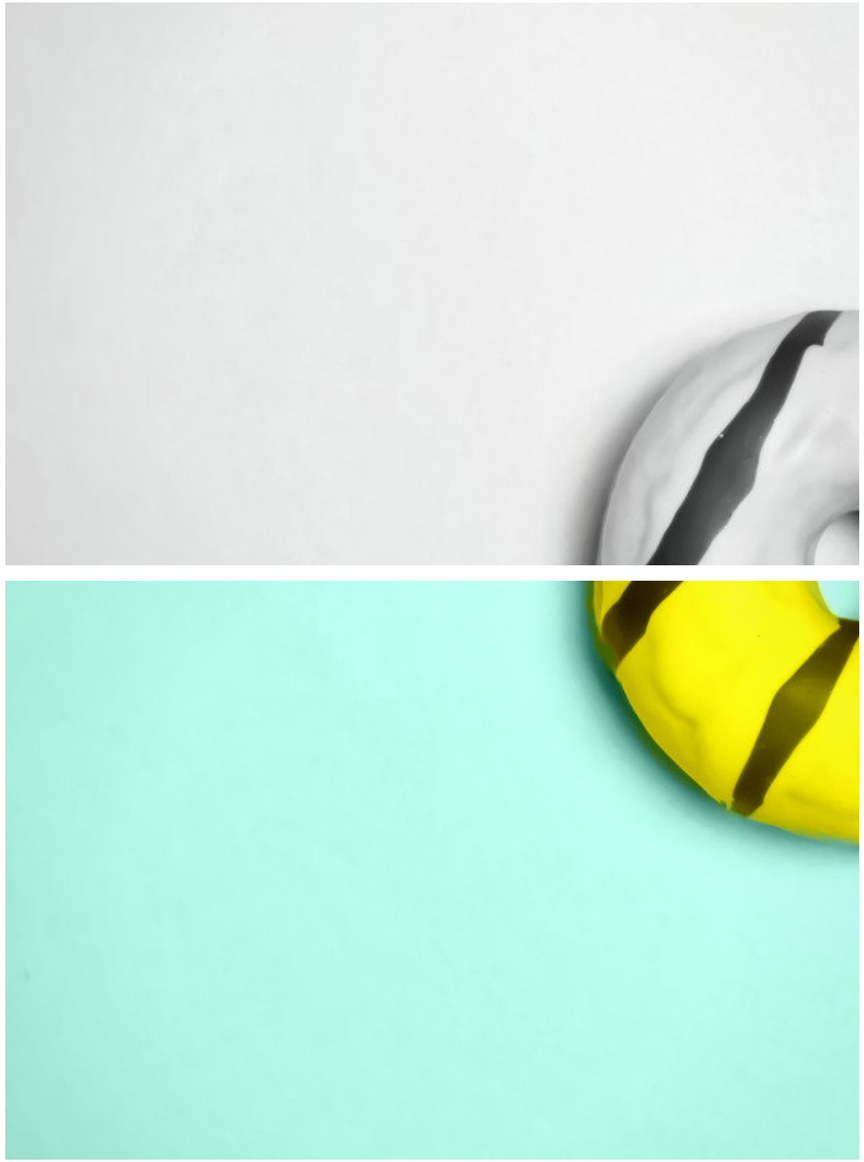
CODAJY

Pick a new color
Add a color mask to the background.
Mind internal borders!
Generate result

CODIJY

Just look at how accurately CODIJY treated the border!
To fix occational color spreading just add a stroke or two!

CODEJY



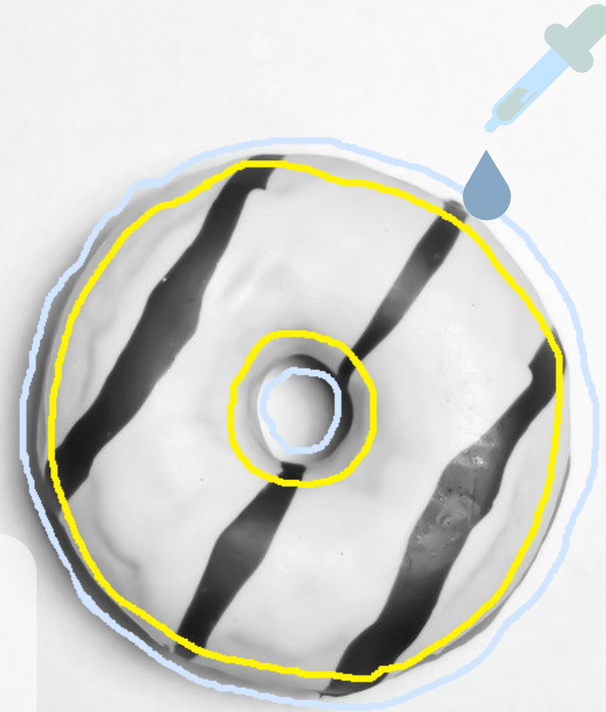
# How to change mask (stroke) color?

CODIJY

Select Repaint tool

Pick a new color

Fill the stroke with a new color



To adjust stroke color on the spot, use HSB Repaint, located next to the Repaint tool.

Generate result

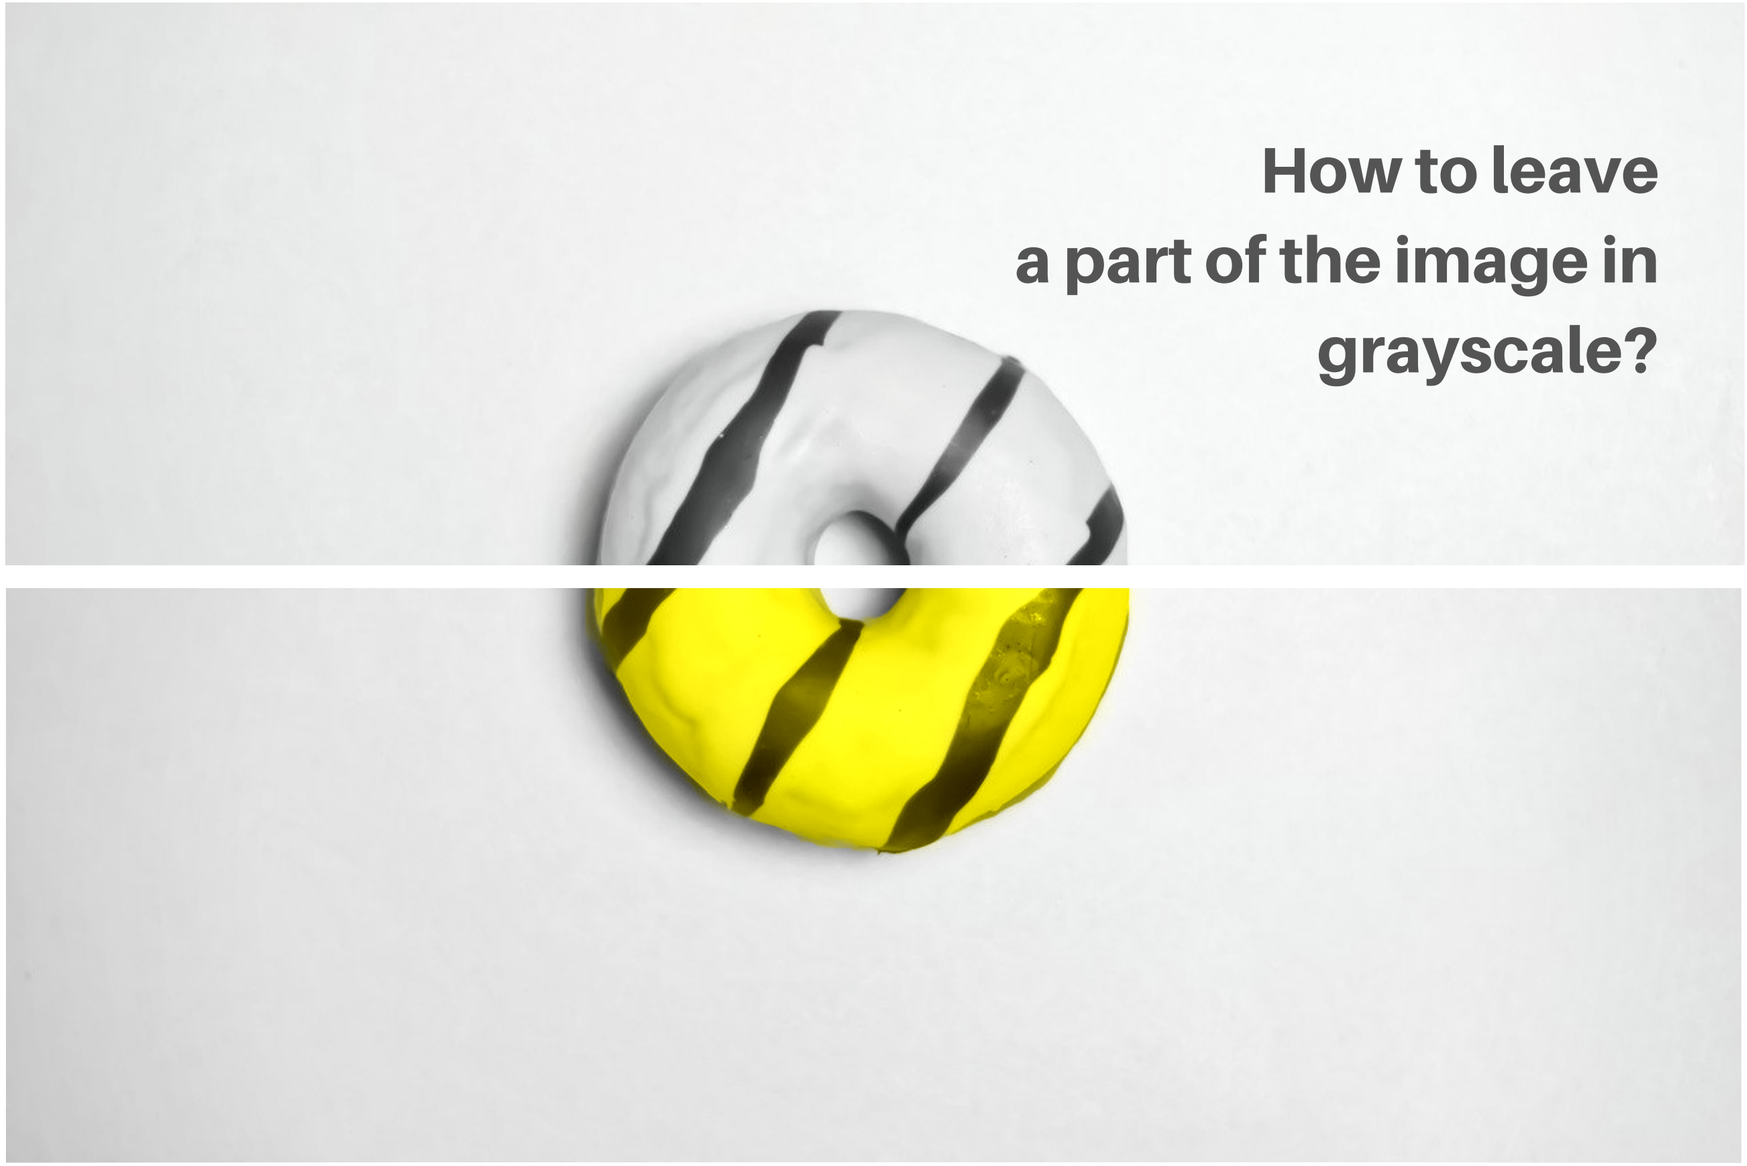
CODEJY

The new color seamlessly replaced the old one!

**Save you work to a document!**
It will store masks and colors for future reference!

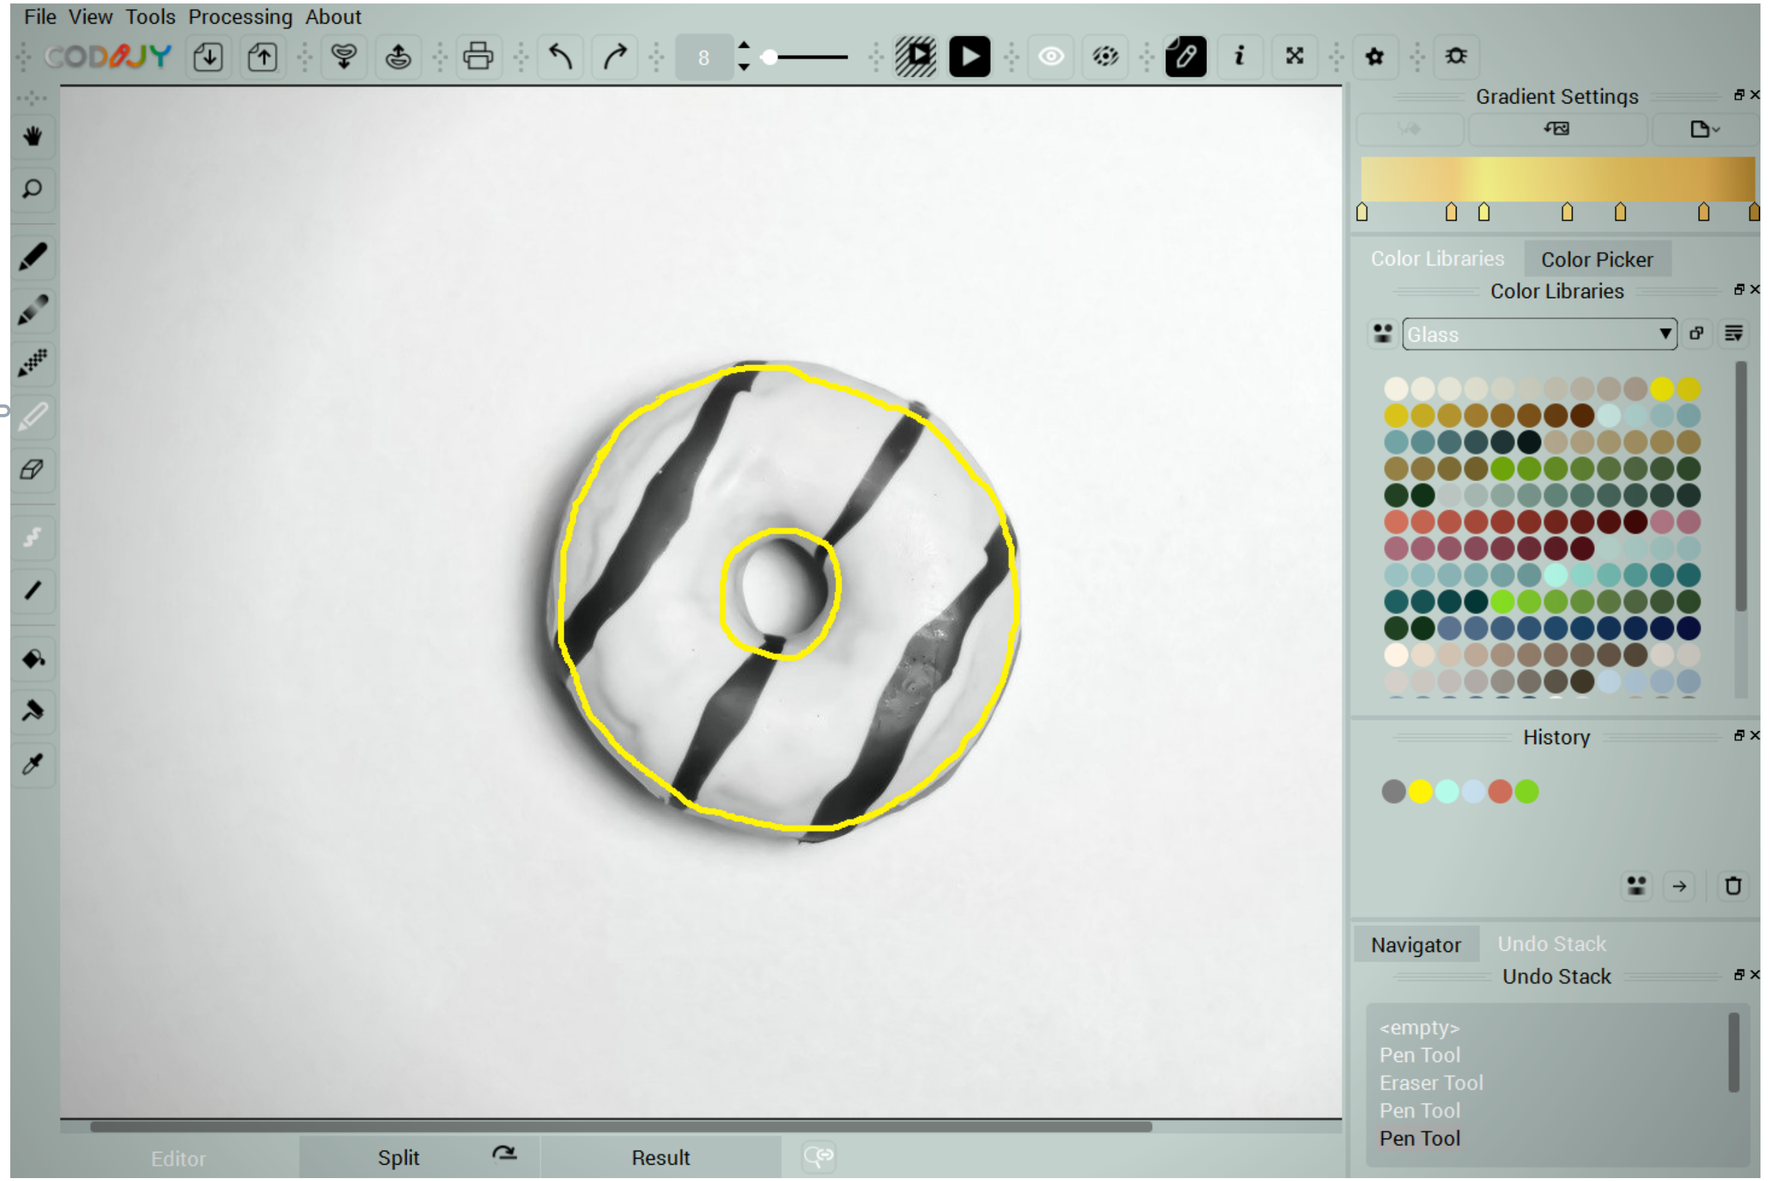
CODEJY

# How to leave a part of the image in grayscale?



CODAJY

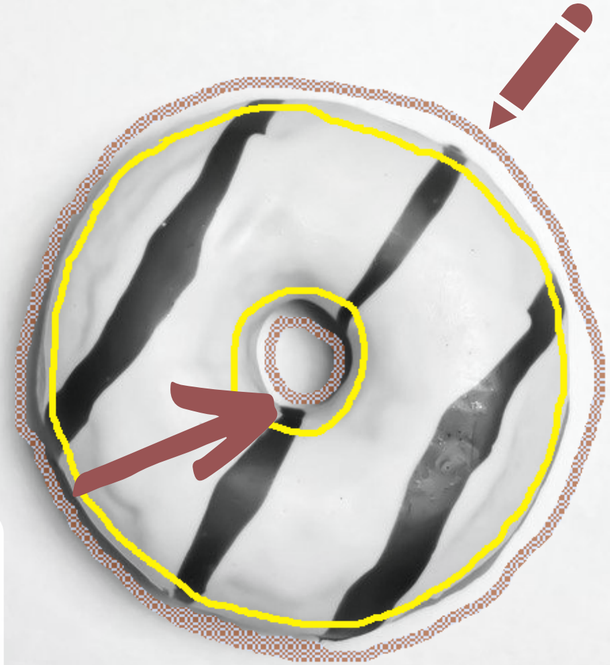
Decolor Pen



CODAJY

Select Decolor pen

Draw a decoloring stroke over the area, you wish to leave grayscale.



Don't forget about the internal border!

Generate result

CODIJY

CODIJY keeps the border between color and grayscale neat and tidy.

Let's see how to add the same effect to a color image!

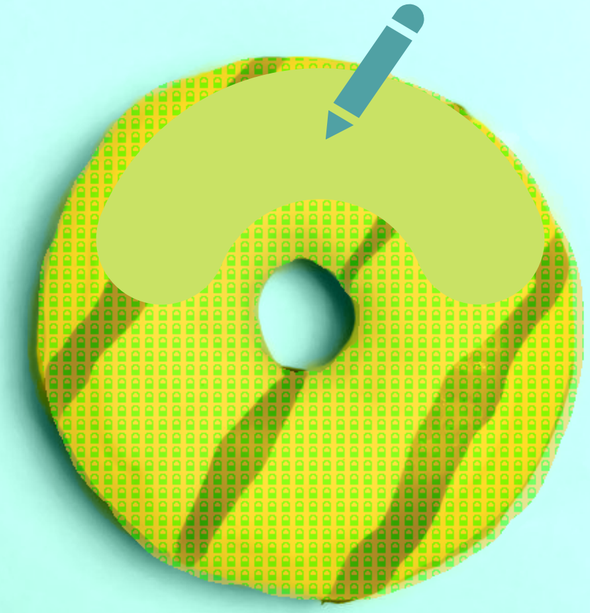
CODIJY

Select Color Protection

Cover the object with a protection mask, to keep its original color.



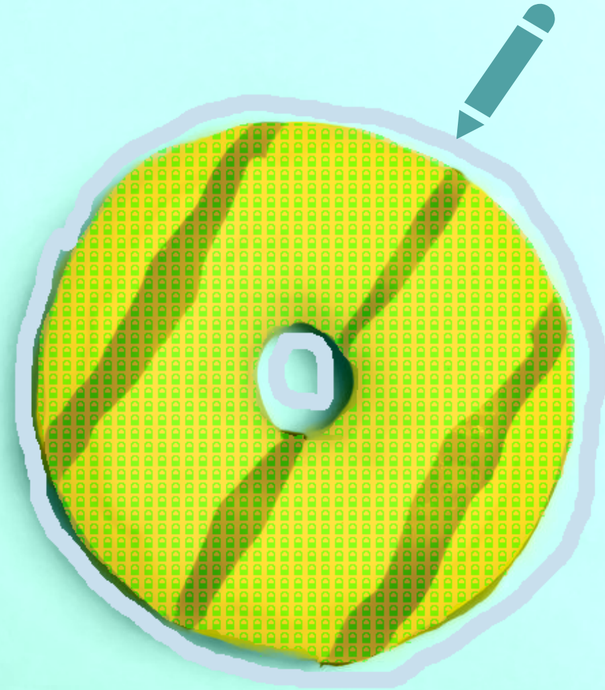
Larger brush width lets cover the whole area with a few movements!

Generate result

CODAJY

Select Pen Tool

Pick a color



Add a simple color stroke over the unprotected area.

To remove color from background use Decolor Pen instead.

Generate result

CODEJY

Look at the refreshed color of the background!

Don't forget to save your work!
