## Smart control.

Between [Amazon Alexa](#), [Google Assist](#), [Apple Home Kit](#) and [SmartThings](#) products, you probably already have control of a lot of the technology in your home. Whether that's controlling a single smart speaker with Google Assist built-in or a host of Alexa-enabled products including your lights, thermostat, smart doorbell and Fire TV. But what if you have different devices from different brands?

Smart homes really get fun when you bring all your smart technology into a single app. The Best Buy whole home smart system of choice is [Savant](#), an intuitive control system that combines all your smart home products into a single app. No matter the brand or product, it all comes together; allowing you to create scenes, turn everything on or off at once, and even use voice commands to simplify your life; saving you time, energy and money. Security gates, sprinkler systems, pool heaters and more: if it plugs in, a Best Buy Home Expert can find you a solution to control it using the Savant system.

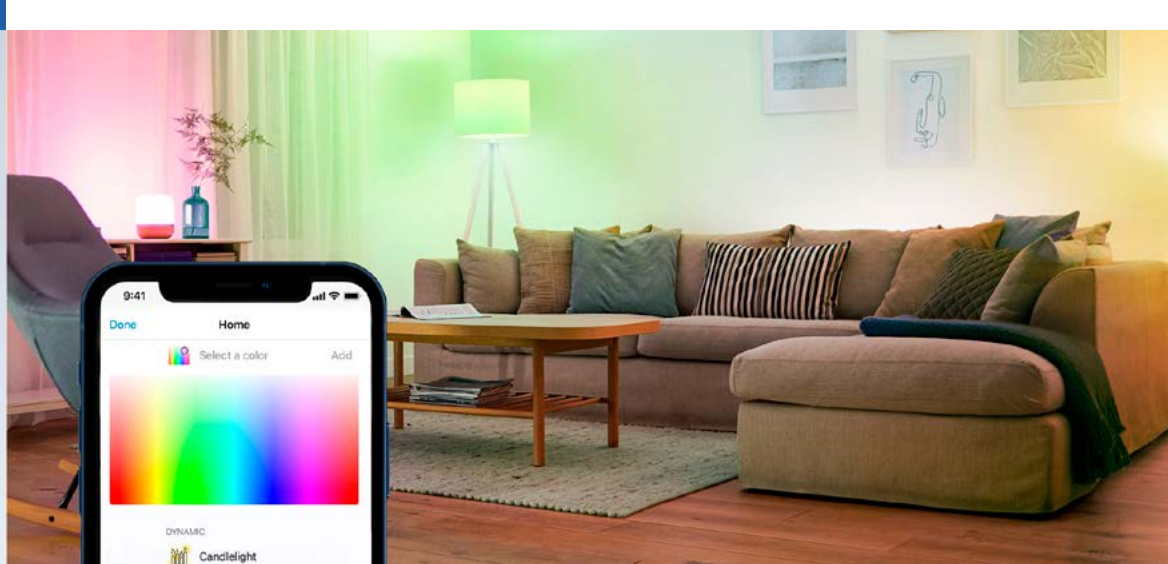

## Smart audio.

There are so many ways to bring incredible sound into your home, from simple [smart speakers](#) to incredible [tower speakers](#) to [surround sound systems](#). Most modern speaker options have smart control built in or can be integrated with a smart control system or device. Choosing the right size, quality, distribution and, of course, budget is paramount in getting what's best for you. That's why it's imperative to connect with a Home Expert to outfit your home with a speaker solution that is right for you.

The cool thing is, when you incorporate a smart home control system, like Savant, you can mix and match speakers throughout your home. Say you want premium level [Bowers & Wilkins](#) speakers in your family room, combined with a lower level speaker in your bedrooms, and an even simpler solution in your garage. Savant brings multiple brands and solutions together into one easy-to-use audio unit.

The choice is yours, and we can show you how to build out that system. Whether it's a single plug-and-play model, multiple speakers in a system, or in-wall and in-ceiling speakers from some of the finest speaker brands, we'll help you find the quality and price that are right for you, your needs and budget. With Amazon Alexa and Google Assist already built in to many of these products and control systems, not only can you listen to your favorite music with a simple voice command, you can also search the web, get weather updates, set times and alarms and so much more. Plus, smart displays let you watch videos, look at recipes or research the answers to your kid's homework. The options are nearly endless.

## Smart lighting.

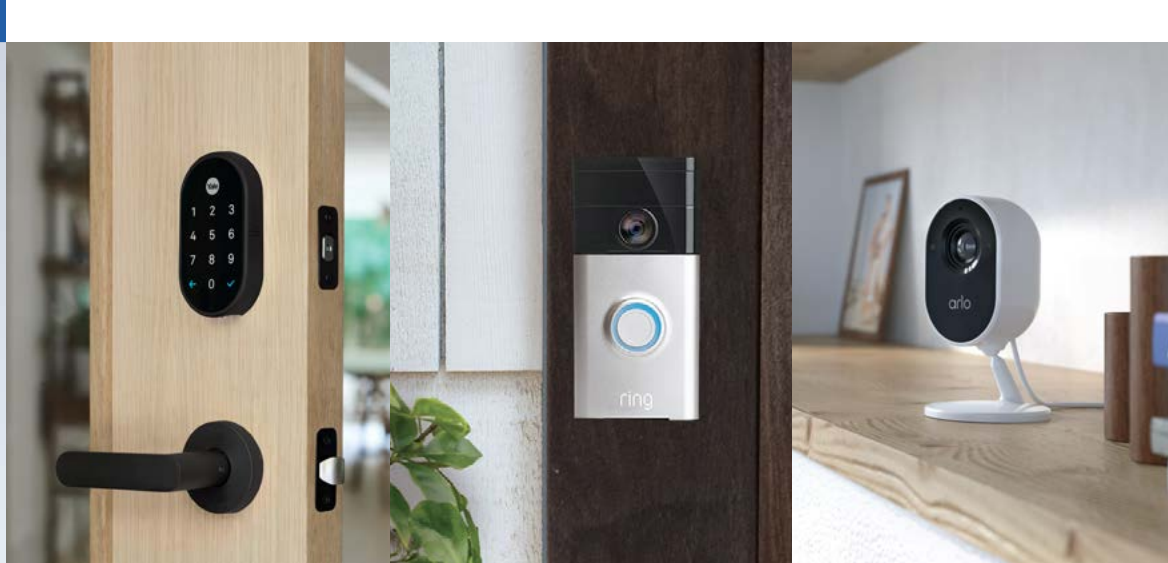

With the latest in [smart lighting](#), you can control more than just the intensity of your lighting with dimmers: you can also adjust the color with select light bulbs. Control one room, or your entire home, at once.

Lighting isn't just electric light: it's natural light as well. With window blind control, you can open and close shades throughout the day to create the right atmosphere. Best yet, combine natural light and electric light control with timers that control when blinds should close and lights should come on, or create individualized lighting scenes for dinner, movie watching or special events. Smart lighting is true lighting control, where having too much light or glare, or it being too dark, is no longer an issue.

## Smart thermostats.

Save energy and money with the latest [smart thermostats](#) that allow you to have unique temperature settings from day to night, weekdays to weekends, or every day of the week. Some even offer a learn feature that remembers adjustments you make throughout the day to deliver the perfect temperature in the future. And with Wi-Fi connection, you can adjust the temperature of your home, even when you're hundreds of miles away.

## Peace of mind.

Keep an eye on your home whether you're home or away with [smart cameras and doorbells](#). Brands like Nest, Ring, Amazon and more, are not only able to interact with your smart home lighting, but offer single app peace of mind about what's going on at home.

## Routers and Wi-Fi.

Smart home technology requires a strong Wi-Fi signal, and Best Buy® will make sure it's stronger than ever. With [modems](#), [routers](#) and [mesh Wi-Fi systems](#), we will ensure you have a strong signal in every corner of your home, inside and out. With solutions that range from the simple to commercial grade, we'll ensure you have a strong signal.

## Connect with a smart person.

When you're ready to bring smart to your home, get a consultation from a Best Buy Home Expert. They'll show you all the ways to bring smart technology to every room in your home. With our know-how, products and solutions, we'll help you create a smart home you can put in the palm of your hand.

**How smart is that?**
