SETTING UP YOUR FREEZER

1 Prepare your refrigerator

- Remove the exterior and interior packing.
- Let the refrigerator stand upright for approximately two hours before connecting it to power.
- Wipe the inside.
- When moving your refrigerator, do not tilt it beyond 45° from upright.

2 Find a suitable location

- This refrigerator is designed to be free standing only, and should not be recessed or built-in.
- Place your refrigerator on a floor that is strong enough to support the refrigerator when it is fully loaded.

- Allow 3.9 inches (10 cm) of space between the sides of the refrigerator and the walls, 3.9 inches (10 cm) between the back of the refrigerator and the wall, and 11.8 inches (30 cm) between the top of the refrigerator and the ceiling.
- If you locate the refrigerator next to a fixed wall, allow sufficient space on the hinge side for the door to swing open.
- Locate the refrigerator away from direct sunlight and sources of heat, such as a stove, heater, or radiator. Direct sunlight may affect the acrylic coating and heat sources may increase electrical consumption. Extremely cold temperatures may also prevent the refrigerator from performing properly.
- Avoid locating the refrigerator in moist areas.

3 Level your refrigerator

- It is very important for the refrigerator to be level. If the refrigerator is not leveled during installation, the doors may not close or seal properly, causing cooling, frost, or moisture problems.
- To level your refrigerator, rotate the leveling feet clockwise (to raise) the refrigerator or counter-clockwise (to lower).
Note: If your doors do not line up after leveling, see *Adjusting the refrigerator doors* in the online user manual.

4 Installing the handles

- 1 Unplug the refrigerator.
- 2 Identify the handles. Lay all four on a flat surface. The refrigerator door handles extend higher than the freezer drawer handles.

- 3 Screw the extended-head screws into the door/drawer holes with the wrench provided. Do not overtighten. The screw heads should extend above the surface of the door/drawer.
- 4 Place the door/drawer handle over the heads of the screws.
- 5 Install the remaining two screws into the holes on the handle, then tighten them securely.

5 Connect the water supply line

Note: Water line installation kits are available from your local hardware store.

- 1 First shut off the main water supply line and turn the ice-maker off.
- 2 Locate the nearest cold water line (potable water only).
- 3 After connecting the water shut off valve to the water supply line, turn your main water supply back on and flush several gallons water to clear the water supply line.
- 4 Turn the water valve off.

- 5 Connect the water supply tubing to the valve you installed in the water line.

- 6 Connect the other end of the water supply tubing to the water connector on your refrigerator.
- 7 Turn the water on and check for any leakage.
Caution: Only connect the water line to a drinkable water source.

6 Plug in your refrigerator

- Wait for 30 minutes, then open the door to make sure that the refrigerator is working properly.

7 Set the refrigerator temperature

- 1 Press **REF. TEMP.** The Refrigerator Temperature display turns on.
- 2 Press **REF. TEMP.** repeatedly until the desired temperature is displayed. The temperature range is 36° and 46° F (2° and 8°C).
