

Fever Scout

Fever Scout is a soft wearable thermometer that continuously measures temperature and wirelessly sends that information to your smartphone or tablet.

How Does It Work

Fever Scout comes in the form of a soft, flexible patch in a fun shape and colors. Simply pair it with your phone once, stick it onto skin near the armpit. The mobile app will then track the wearer's temperature continuously.

Why

With Fever Scout you can monitor the progression of a fever over time and track associated symptoms to share with a doctor. Since it works from a distance, you can always monitor a fever without having to interrupt a sleeping baby or child. You can even set alerts on your smartphone if a specific high temperature is reached.

The alerts work even if your phone is asleep. Because fever is usually the first sign of infection, Fever Scout's use is applicable to more than just babies and children. Post-operative patients, cancer patients, and seniors receiving in-home care, can benefit from Fever Scout™.

Where Does It Work

Fever Scout works anywhere inside or outside of the home as long as it has a charge and is within arms length of its battery operated carrying case. The case also holds extra adhesives and acts as a recharger for Fever Scout so that it is always ready on the go when you need it. With the case within an arm's distance of Fever Scout, you can track to the wearer's temperature as far as 130 feet away – convenient if your child's room is down the hall.

When

Fever Scout received FDA 510K clearance and will be available for purchase April 2017 at Best Buy stores nationwide and online at Amazon.com, BestBuy.com, Target.com and FeverScout.com.

Fever Scout Features

Continuous use, until you're well again

The patch can be used continuously for seven days before it needs to be recharged.

Applicable Receivers

Fever Scout™ works with Android devices, 4.3 or later, and Apple devices, iPhone 5s or later and iOS 8.0 or later.

Continuous temperature monitoring

The charger will send temperature data to your phone (up to 130 ft/40 m), allowing you to monitor temperature without having to be near the user wearing the Fever Scout™ patch.

Great for children

Fever Scout comes in a fun shape and colors. Children think of Fever Scout™ and not a medical device.

Stick with Fever Scout

Each Fever Scout™ comes with four medical-grade, disposable adhesives. Wearing time is typically one day, but some users may want to change adhesives more often depending on skin type and comfort level. Additional adhesives can be purchased separately as needed.

Convenient charging/carrying case

Fever Scout's carrying case doubles as a charger and signal amplifier for your device.

Easy cleaning

To clean the Fever Scout™ patch before applying a new adhesive, wipe both sides with an alcohol wipe.

Jiang Li
CEO

About the Founder

VivaLnk, Inc. CEO Jiang Li has both passion and extensive experience in bringing innovative technology and products into the marketplace. He has held various senior management positions in both large high tech organizations and startup companies.

Prior to joining VivaLnk, he was responsible for new product and technology development as the VP of engineering in Kovio and ThinFilm Electronics, leading printed electronics companies. Prior to that, he worked at AMD and the joint venture between AMD/Fujitsu, Spansion.

As the VP of product engineering in Spansion, Jiang managed the major new product launches in Spansion. Jiang holds a Ph.D. degree from the University of Wisconsin-Madison, and a bachelor's degree from Zhejiang University in China.

About VivaLnk

VivaLnk is a Silicon Valley based company founded in 2014 that makes eSkin™ technology. eSkin is a circuit board that is as thin as your skin. It's comfortable to wear, stretchy, breathable, and non-invasive and can be used as platform for sensor integration and data services.

VivaLnk is the first company to commercialize eSkin technology, through Google's eSkin Tattoo in 2014. More recently, the company launched Fever Scout, a soft, wearable, stick-on thermometer that continuously monitors a wearer's temperature, sharing data with any smartphone or tablet via Bluetooth or the cloud.

The device can be worn overnight and alert a caretaker of a higher fever providing peace of mind. In 2017, VivaLnk will launch Vital Scout, a durable, non-invasive, highly accurate, wireless patch for monitoring your stress and physical health.
