Installation tips

Installing dowels

CAUTION: Make sure that you use glue with the dowels. The glue helps stabilize your TV stand and keeps it from coming apart.

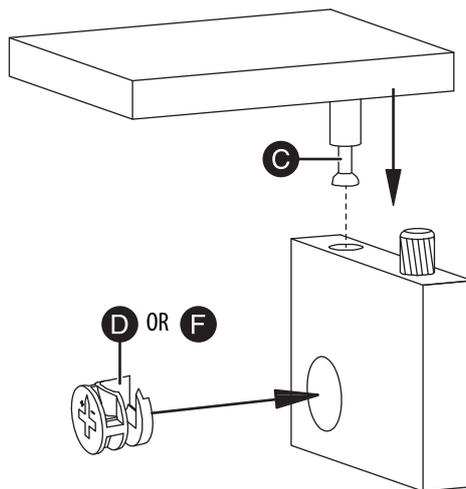

- 1 Put a drop of glue (**A**) in the dowel hole, then insert about 2/3 of the dowel (**B** or **E**) into the hole. You can tap the dowel with a rubber mallet, if necessary.
- 2 After the dowel is installed, wipe off the excess glue with a damp cloth.

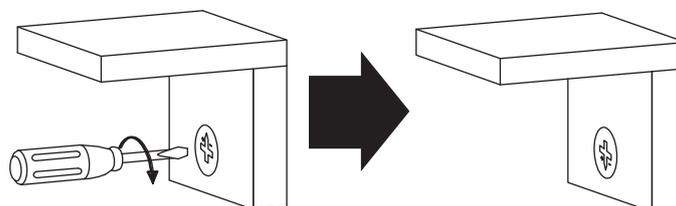

Installing cam locks and cam screws

One end of a cam screw (**C**) is threaded, the other end is not. The un-threaded end locks into a cam lock (**D** or **F**).

- 1 Screw the threaded end of the cam screw (**C**) into the cam screw hole.
- 2 Insert a cam lock (**D** or **F**) into a cam lock hole. Make sure that the open end in the cam lock faces toward the cam screw hole.
- 3 Insert the un-threaded end of a cam screw (**C**) into the opening in the cam lock.

- 4 Use a flat blade screwdriver to turn the cam lock clockwise until the arrow and the + and - symbols point away from the connected panel.

CAUTIONS:

- Do not use an automatic screwdriver to tighten the cam locks.
- Do not over-tighten the cam locks.
