Before You Start

⚠ Please read all instructions carefully.

⚠ Retain instructions for future reference.

⚠ Separate and count all parts and hardware.

⚠ Read through each step carefully and follow the proper order.

⚠ We recommend that, where possible, all items are assembled near to the area in which they will be placed in use, to avoid moving the product unnecessarily once assembled.

⚠ Always place the product on a flat, steady and stable surface.

⚠ Keep all small parts and packaging materials for this product away from babies and children as they potentially pose a serious choking hazard.

IMPORTANT SAFEGUARDS

Read these instructions carefully and retain them for future use. When using the product, basic safety precautions should always be followed to reduce the risk of injury including the following:

●Unpack all hardware bags and components to ensure you have all the parts.

●Use the tools included to assemble the desk, don't use the incorrect tools to assemble.

●Do not climb, stand or sit on the desk.

●Do not place objects on the desk when moving.

●Check to ensure all bolts, screws and brackets are tightened on a regular basis.

●Do not place the table in a humid environment.
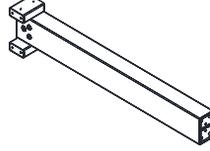

●Do not place heavy objects on the table when storing.

There is potential risk of personal injury not to follow the instructions when in use.

Operational instructions

1. Lift Column
Press the ⊙button or ⊙button to control the lift column up or down ⊙Press the button to control the lifting column to rise, you can see the height (displayed number) on the screen; press the button to control the descending of the lifting column, you can see the height (displayed number) on the screen.⊙
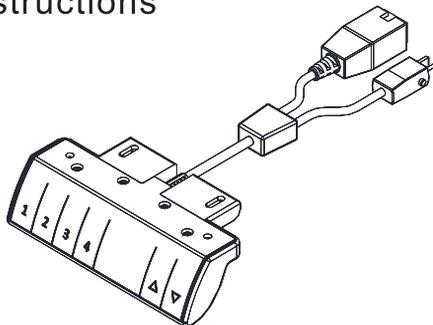

2. Set memory height
Press(❶❷❸❹) button for 2 seconds, set the current height to the memory height, When flashing display "H1~H4" for 2 seconds, and then display the real-time height after 2 seconds.

3. re call memory height
Press the number button (❶❷❸❹) can recall its corresponding height, lift column will automatically run to the right position.

4. stroke reset
"E10、E20" alarm state or running to the lowest height position, press the button ⊙3 seconds, after the display (ˌ͏ᴇˢ Reset) is released, the lifting column starts to run down to the bottom of the frame and rebound to a certain height, the reset is completed to display the lowest height.

5. protection and alarm

①Block Protection: Display "E02." During the movement of the desktop, a vibrating, colliding or tilting desktop will sound an alarm and stop the movement immediately. After the automatic release, it will move in the reverse direction to set the distance, you can press any key to stop and release during the reverse operation. Check and make sure that the desktop will not vibrate significantly, hit obstacles or re-tilt during operation.

②Overheating protection: Display "Hot ." Continuous operating may initiate this protection and should be recharged or waited for at least 18 minutes before use.

③Motor abnormal protection: Display "E10." Should be powered off, re-check and ensure that the connection of the motor to the controller is reliable and then reconnect.

④Overload protection: Display "E20." This alarm should be removed from the desk top when it's operating up; if this alarm occurs when it's operating down, cut off the power and the heavy objects should be removed, and the power should be re-charged.

⑤Under-voltage protection: Display "E31." Should be powered off, recheck and make sure the connection between the power supply and the handset is reliable, then connect the power.

⑥Over-voltage protection: Display "E32." Should be powered off, recheck and make sure the connection between the power supply and the handset is reliable, then connect the power.
