PRODUCT OVERVIEW

Next-generation dash technology takes the Alpine Halo display to new heights with even more features that bring out the full potential of music playback.

PRODUCT FEATURES

Next-Gen Dash Technology – Take your dash to new heights with the high-resolution Alpine Halo11. Featuring Wireless Apple CarPlay® and Android Auto™, plus built-in Bluetooth® hands-free calling with audio streaming. Access music, messages, phone calls, and maps on a smartphone through touch or voice commands with the included external microphone.

Hi-Res Audio – The Alpine Halo11 features Hi-Res Audio playback and has on-board tuning features like 5-band graphic EQ or 13-band parametric EQ per channel, for continuous frequency control. The 6-channel time correction ensures that music is staged properly in the front and center of the vehicle.

Increased Adjustability – The screen is attached to an adjustable mount on a single-DIN chassis that's designed to fit in most dash openings. The screen has five vertical adjustments and two separate depths that lock into position for a sturdy installation. A new pressure tilt mechanism allows for more flexibility when positioning the screen for optimized viewing and access to dash and HVAC controls.
