T9 Smart Thermostat

With Smart Room Sensor

Control Comfort in Any Room

Smart Room Sensors help you experience the right temperature in the right rooms. When paired with your T9 Smart Thermostat, sensors let you prioritize living areas during the day and bedrooms at night for comfort where you want it, when you need it.

Smart Living, Comfortable Sleeping

The right temperature for the right moments.

Extend your thermostat's reach beyond the hallway. Now, your thermostat can know the temperature in any room – like your bedroom – to help make the room more comfortable for a great night's sleep.

Experience savings while you're away and comfort while you're home.

Adjust your thermostat from anywhere, or let the home react to your schedule with geofencing. Smart alerts let you know if the home is too hot or too cold so you can take action.

Get whole home coverage.

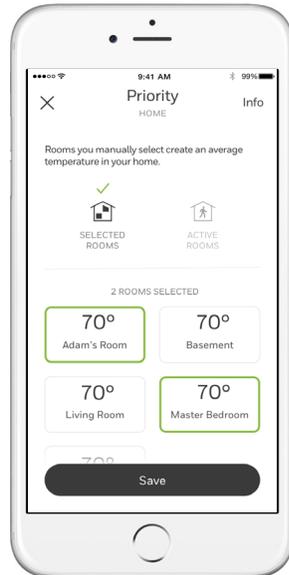

Smart Room Sensors have a range of up to 200 feet and a 1-year battery life. Install sensors practically anywhere you want.

Balance rooms that are too warm or too cold.

Balance the temperature of multiple rooms, creating a more comfortable home for you and your family.

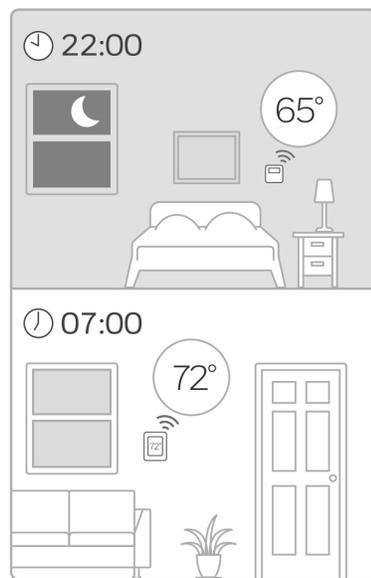

Comfort can follow your lead.

With people detection, Smart Room Sensors can know when a room becomes occupied, automatically adjusting the room's temperature when you enter.

Setup is smarter and simpler than ever.

The thermostat can configure itself – just answer a few simple questions to get started. The included power adapter is an easy-to-install, low-voltage alternative to a C-wire, so the thermostat is compatible with most homes.

Range can vary depending on your home's construction, wireless interference, and other factors. Battery life may vary by use.
