7. Troubleshooting

Problems	Causes	Solutions
Non-power-connected/all LED off	Maybe the power supply is not connecting well or use the wrong power adaptor	Please check if the power supply is connecting well and the output voltage value is correct as recommended
No sound or sound issues	Maybe the HDMI connection is not well; the audio format is not supported by the displays; the source player set another port to output audio	Please check if the HDMI cables are connecting well; if the audio format is supported by the displays, customers can change to the supported audio format or the player's audio output is setting HDMI audio output or not
No picture or picture flicker	Maybe the HDMI cable quality and UTP cable quality is not good enough or not connecting well	Please check if the HDMI and UTP connection is well, or change another good quality HDMI 1.4 standard HDMI cable or UTP(CAT6 or better cable is recommended) cable will solve the issue.
