Western Digital Technologies, Inc.’s ("WDT") general policy does not recommend the use of its products in life support applications wherein a failure or malfunction of the product may directly threaten life or injury. Without limitation to the foregoing, WDT shall not be liable for any loss, injury or damage caused by use of its products in any of the following applications:

- Special applications such as military related equipment, nuclear reactor control, and aerospace
- Control devices for automotive vehicles, train, ship and traffic equipment
- Safety system for disaster prevention and crime prevention
- Medical-related equipment including medical measurement device

Accordingly, in any use of WD Blue SSD products in life support systems or other applications where failure could cause damage, injury or loss of life, the products should only be incorporated in systems designed with appropriate redundancy, fault tolerant or back-up features. Per the Terms and Conditions of Sale found in your order acknowledgement, the user of WD Blue SSD products in life support or other such applications assumes all risk of such use and agrees to indemnify, defend and hold harmless WDT and its affiliates against all damages.

Security safeguards, by their nature, are capable of circumvention. WDT cannot, and does not, guarantee that data will not be accessed by unauthorized persons, and WDT disclaims any warranties to that effect to the fullest extent permitted by law.

This document and related material is for information use only and is subject to change without prior notice. WDT assumes no responsibility for any errors that may appear in this document or related material, nor for any damages or claims resulting from the furnishing, performance or use of this document or related material. Absent a written agreement signed by WDT or its authorized representative to the contrary, WDT explicitly disclaims any express and implied warranties and indemnities of any kind that may or could be associated with this document and related material, and any user of this document or related material agrees to such disclaimer as a precondition to receipt and usage hereof. EACH USER OF THIS DOCUMENT EXPRESSLY WAIVES ALL WARRANTIES AND WARRANTIES OF ANY KIND ASSOCIATED WITH THIS DOCUMENT AND/OR RELATED MATERIALS, WHETHER EXPRESS OR IMPLIED, INCLUDING WITHOUT LIMITATION, ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR INFRINGEMENT, TOGETHER WITH ANY LIABILITY OF WDT AND ITS AFFILIATES UNDER ANY CONTRACT, NEGLIGENCE, STRICT LIABILITY OR OTHER LEGAL OR EQUITABLE THEORY FOR LOSS OF USE, REVENUE, OR PROFIT OR OTHER INCIDENTAL, PUNITIVE, INDIRECT, SPECIAL OR CONSEQUENTIAL DAMAGES, INCLUDING WITHOUT LIMITATION PHYSICAL INJURY OR DEATH, PROPERTY DAMAGE, LOST DATA, OR COSTS OF PROCUREMENT OF SUBSTITUTE GOODS, TECHNOLOGY OR SERVICES.

No part of this document may be reproduced, transmitted, transcribed, stored in a retrievable manner or translated into any language or computer language, in any form or by any means, electronic, mechanical, magnetic, optical, chemical, manual or otherwise, without the prior written consent of an officer of WDT.

All parts of the WDT documentation are protected by copyright law and all rights are reserved. 2. Introduction

2.1 Minimum System Requirements

The SanDisk® SSD Dashboard is a Windows application. It can be installed on 32 or 64 bit Windows Vista, 7, 8, or 8.1 environments. Admin rights are required for installation and execution of the application.

Supported Operating Systems

- Windows Vista (32/64 bit)
- Windows 7 (32/64 bit)
- Windows 8 (32/64 bit)
- Windows 8.1 (32/64 bit)

Additional Requirements

- .NET 4.0 or above
- Internet Explorer 9 or above

2.2 Supported Languages

17 languages are supported:

- Czech
- Danish
- Dutch
- English
- French
- German
- Italian
- Japanese
- Korean
- Polish
- Portuguese
- Russian
- Simplified Chinese
- Spanish
- Swedish
- Traditional Chinese
- Turkish
2.3 Installation

You may download the current version of the SanDisk SSD Dashboard software from http://www.sandisk.com/ssddashboard. Once it has been downloaded, double-click on the SanDiskSSDDashboardSetup.exe file icon to launch the installation program.

Select a language and then click on the Install button to proceed with the installation. Otherwise, click on the red button in the upper right-hand corner to cancel the installation.

![Figure 1: Begin Installation]

When the installation has completed successfully, click on the Finish button. This will automatically launch the SanDisk SSD Dashboard and load the Status section.

![Figure 2: Installation Successful]

**Note:** To perform an Application Update, see section 6.1.
2.4 Usage

The SanDisk SSD Dashboard will automatically scan for SanDisk SSDs when it loads.

If a SanDisk SSD was not connected to the system when the application was loaded, or a specific one is not appearing in the SanDisk SSD Dashboard, you may (re)connect it, then click the Refresh icon to rescan the system for SanDisk SSDs.

Once all of the SanDisk SSD drives have been detected, you may select the specific drive you would like to examine by using the Select drive menu.
Figure 5: Select drive
3. Status

The Status section displays the overall state and health of the drive.

![Status](image)

**Figure 6: Status**

3.1 Model

Product model of the selected SanDisk SSD.

3.2 Firmware Version

Version number of current firmware installed on the selected SSD.

3.3 Drive Health

Drive Health summarizes the current condition of the SSD based on S.M.A.R.T. attributes.

- **Normal**: The drive is in good condition.
- **Poor**: The number of spare blocks has reached the minimum threshold. It is suggested to replace this drive with a new SSD.

3.4 Notifications

Any notifications, such as software or firmware updates available or S.M.A.R.T. attribute warnings, will be displayed in this area.

3.5 Security

If the selected drive supports security, this area will be visible.
It will display “Not Activated” if the security protocol is not active. Otherwise, it will display the name of the active security protocol, such as TCG Opal 2.0.

3.6  Capacity

Displayed capacity is based on Windows® total reported capacity.

- **Green**: Free space
- **Blue**: Used space
- **Gray**: Unallocated space
- **Yellow**: Other

3.7  Volumes

The chart displays any drive volumes recognized by Windows.

- **Green**: Free space
- **Blue**: Used space
- **Red**: No free space

3.8  Life Remaining

The Life Remaining percentage represents the remaining writes that the drive can perform in its lifetime. **Note**: If this feature is not supported by the drive, a “Not Supported” message will be displayed.

3.9  Temperature

The temperature display is reported by the drive.

- **Green**: Normal operation
- **Red**: Drive is currently overheating

3.10 Interface Speed

*SSD Capability* is the fastest speed supported by the drive.

*Connection Speed* is the actual speed negotiated with this system. If the Connection Speed is lower than the SSD Capability, try connecting the drive to a faster port for better performance.
4. Performance

4.1 Performance Chart

The Performance chart has the ability to show two different real time performance metrics. The chart will scroll from right to left showing a moving 5 minutes time line on the horizontal axis. The vertical axis of the chart will show either Mega Bytes per second or I/O operation count per second.

Transfer Speed MB/s

The disk read and writes are shown in the chart with green and blue indicators, respectively.

![Figure 7: Transfer Speed MB/s](image-url)
Transfer IOPS

The disk I/O read and writes are shown in the chart with orange and purple indicators, respectively.

Figure 8: Transfer IOPS
4.2 TRIM

TRIM frees up space on the SSD used by files that have since been deleted.

![Figure 9: TRIM](image)

Use the **Run TRIM Now** button to manually run TRIM.

It is recommended to run TRIM weekly. Select the frequency to be **weekly**.

To view SanDisk SSD Dashboard scheduled TRIM tasks, click the **Windows Task Scheduler** button to schedule the task. Each TRIM task is specific to a drive, so multiple drives can be scheduled differently for TRIM.

![Figure 10: Windows Task Scheduler](image)
5. Tools

5.1 Third Party Offers

Third party offers relevant to the SSD drive will be displayed at the bottom of the Tools section. These may include applications or services such as drive cloning, anti-virus software, theft recovery, drive security, etc... To find out more about a particular offer, simply click on the image or third party logo.

Figure 11: Third Party Offers
5.2 Firmware Update

You may use the **Update SSD Firmware** button to initiate an update or click on the **Show More Options** link to select additional methods to update the firmware.

![Figure 12: Firmware Update](image)

When you click on the **Update SSD Firmware** button, a confirmation dialog will appear.

**Note:** It is strongly recommended that you backup your data before updating the firmware.

![Figure 13: Firmware Update Confirmation](image)
Once the firmware has been downloaded to the drive, the power to the SSD must be turned off to complete the firmware update process. This can usually be done by shutting down the computer then turning it back on.

![Firmware Update – System Shutdown Required](image1)

**Figure 14: Firmware Update — System Shutdown Required**

For legacy drives, SanDisk SSD Dashboard may ask to reboot the computer to run the firmware update tool.

![Firmware Update - Legacy Drives](image2)

**Figure 15: Firmware Update - Legacy Drives**

When the boot process is complete, select *SanDisk SSD Dashboard* to initiate the firmware update.

![Bootable CD/DVD - Select SanDisk SSD Dashboard](image3)

**Figure 16: Bootable CD/DVD - Select SanDisk SSD Dashboard**
The firmware update process will run, and upon successful completion, it will shut down the computer.

![Figure 17: Bootable CD/DVD - Firmware Update Process](image)

You will need to turn the computer back on.

**Check for Updates**

Click on **Check for Updates** to manually check if a firmware update is available for the selected drive.

![Figure 18: Check for Firmware Updates](image)

If one is found, the status message will change to “There is new firmware available for this drive” and the available update options will be displayed.
Create Bootable USB Drive

Some firmware updates may require you to create a bootable USB with the firmware update tool on it. The bootable USB drive can also be used as a portable tool to update SSDs on multiple systems.

Click on the Select USB Drive dropdown to choose the desired USB drive and then click on the Create USB Drive button. If it is not listed, click on the Refresh icon next to the dropdown menu to scan for the USB drive. It is recommended to backup any existing data on the USB drive before proceeding.

**Note:** The USB drive must be formatted as FAT or FAT32.

![Create Bootable USB Drive](image1)

**Figure 19:** Create Bootable USB Drive

Reboot the computer with the USB drive plugged in and select USB Storage Device as the boot device.

![Bootable USB Drive – Select USB Storage Device](image2)

**Figure 20:** Bootable USB Drive – Select USB Storage Device
When the boot process is complete, select **SanDisk SSD Dashboard** to initiate the firmware update.

![Figure 21: Bootable CD/DVD - Select SanDisk SSD Dashboard](image1)

The firmware update process will run, and upon successful completion, it will shut down the computer.

![Figure 22: Bootable CD/DVD - Firmware Update Process](image2)

You will need to turn the computer back on.
Create Bootable CD/DVD

You may download an ISO file which can be used with your favorite CD/DVD burning software to create a bootable CD/DVD. This will allow you to boot from the disc and run the firmware update on an SSD. Click on the Create ISO file button then select the folder where the ISO file will be saved.

Figure 23: Create Bootable CD/DVD Using ISO File

Next, use your favorite CD/DVD burning software to select the downloaded ISO file and burn it to a disc.

Figure 24: Create Bootable CD/DVD
Reboot the computer with the disc in the CD/DVD drive and select **CD/DVD Drive** as the boot device.

![Figure 25: Bootable CD/DVD – Select CD/DVD Drive as Boot Device](image)

When the boot process is complete, select **SanDisk SSD Dashboard** to initiate the firmware update.

![Figure 26: Bootable CD/DVD - Select SanDisk SSD Dashboard](image)

The firmware update process will run, and upon successful completion, it will shut down the computer.

![Figure 27: Bootable CD/DVD - Firmware Update Process](image)

You will need to turn the computer back on.
Update Using File on My Computer

If there is a specific firmware file already downloaded that should be used for the update, click on the Select File button.

![Figure 28: Firmware Update Using File on My Computer](image)

A confirmation dialog will appear before you may proceed to select the file.

![Figure 29: Firmware Update Warning](image)

**Note:** Only compatible firmware update files may be used for this process.
5.3 Secure Erase

Secure Erase will erase the drive and can only be performed on SSD drives that are not the boot drive. Click **Erase Now** to erase the drive and leave it in an unformatted state.

![Secure Erase](image)

**Figure 30: Secure Erase**

If the SSD is the boot drive, you may create a bootable USB drive with the Secure Erase tool on it. The bootable USB drive can also be used as a portable tool to erase SSDs on multiple systems.

Click on the **Select USB Drive** dropdown to choose the desired USB drive and then click on the **Create USB Drive** button. If it is not listed, click on the **Refresh** icon next to the dropdown menu to scan for the USB drive. It is recommended to backup any existing data on the USB drive before proceeding.

**Note:** The USB drive must be formatted as FAT or FAT32.

![Create Bootable USB Drive for Secure Erase](image)

**Figure 31: Create Bootable USB Drive for Secure Erase**
5.4 Sanitize

Sanitize will explicitly erase all of the data on the drive and can only be performed on SSD drives that are not the boot drive. Click **Erase Now** to erase the drive and leave it in an unformatted state.

![Figure 32: Sanitize](image)

If the SSD is the boot drive, you may create a bootable USB drive with the Sanitize tool on it. The bootable USB drive can also be used as a portable tool to erase SSDs on multiple systems.

Click on the **Select USB Drive** dropdown to choose the desired USB drive and then click on the **Create USB Drive** button. If it is not listed, click on the **Refresh** icon next to the dropdown menu to scan for the USB drive. It is recommended to backup any existing data on the USB drive before proceeding.

**Note:** The USB drive must be formatted as FAT or FAT32.

![Figure 33: Create Bootable USB Drive for Sanitize](image)
5.5 Crypto Erase

Crypto Erase is used to revert an OPAL-activated or eDrive-activated SanDisk SSD back to its factory default state. After a Crypto Erase, all security keys will be deleted, rendering the user data unrecoverable. Also, OPAL or eDrive security will be deactivated so that the drive can be reused with any compatible security application.

Crypto Erase can only be performed on security enabled SSDs that are not the boot drive. The drive’s unique Physical Security ID (PSID), which is printed on the drive’s label, is required to perform a Crypto Erase. Click *Erase Now* to erase the drive and leave it in an unformatted state.

![Crypto Erase](image)

*Figure 34: Crypto Erase*

If the SSD is the boot drive, you may create a bootable USB drive with the Crypto Erase tool on it. The bootable USB drive can also be used as a portable tool to erase SSDs on multiple systems.

Click on the *Select USB Drive* dropdown to choose the desired USB drive and then click on the *Create USB Drive* button. If it is not listed, click on the *Refresh* icon next to the dropdown menu to scan for the USB drive. It is recommended to backup any existing data on the USB drive before proceeding.

**Note:** The USB drive must be formatted as FAT or FAT32.
Figure 35: Create Bootable USB Drive for Crypto Erase
5.6 S.M.A.R.T.

S.M.A.R.T. is an industry standard and is an acronym for **Self-Monitoring, Analysis and Reporting Technology**.

![Figure 36: S.M.A.R.T.]

**Diagnostic Short Test**

The S.M.A.R.T. Diagnostic Short Test is automatically run every time the application is launched. It is a quick drive health test as defined in the S.M.A.R.T. specification.

**Diagnostic Extended Test**

The S.M.A.R.T. Diagnostic Extended Test is an extended drive health test as defined in the S.M.A.R.T. specification. When this test is running, you will not be able to do anything else within the SanDisk SSD Dashboard. However, you can cancel the test at any time.

![Figure 37: S.M.A.R.T. Diagnostic Extended Test]

If the test is successful, the description text will change to a green success message. Otherwise, a link will be displayed to go the details of the test.
5.7 Drive Details

Drive Details displays the following information for the selected drive:

- Model Name
- Model String
- SATA Revision
- SATA Link Speed
- Serial Number
- Maximum LBA
- World Wide Name (a unique identifier used for all SanDisk drives)

For additional information, click on Show Advanced Details.
5.8 System Details

System Details displays information about the operating system, computer hardware, and ATA controller(s) used in the system on which SanDisk SSD Dashboard is installed.
6. Settings

6.1 Application Update

If a newer version of the application is available, a message will be displayed in the Notifications area. Clicking on the **New Application Available** link will take you to the Settings section, which will display the number of the new version available. Click on **Update SanDisk SSD Dashboard** to initiate the update.

![Application Update Notification](image)

**Figure 41: Application Update Notification**

Click on **OK** to confirm and proceed with the application update (see figure 6). After the update has finished downloading, the installation process will begin (see **section 2.1**).

![Application Update Dialog](image)

**Figure 42: Application Update Dialog**
6.2 Options

Start SSD Dashboard with Windows Startup

To have the application start when Windows starts, check **Start SSD Dashboard with Window startup**. Additionally, selecting the **Start minimized** checkbox will make the SanDisk SSD Dashboard start in a closed state in the Windows System Tray.

Windows Write-Cache Buffer Flushing

This Option is primarily meant to be used when running performance benchmarks on Windows 8 that will be compared against Windows 7.

Check **Turn off Windows write-cache buffer flushing** to disable this feature. It is recommended to be left unchecked otherwise.

Select Language

Use the dropdown menu to select the display language of the SanDisk SSD Dashboard.
6.3 Email & Text Alerts

The SanDisk SSD Dashboard can be configured to send notifications via email or SMS text message. To send a text message, use the corresponding gateway email address of your phone for your mobile carrier.

**NOTE:** Mobile phone carriers allow sending text messages to phones using gateway email addresses, e.g. 5105551234@mms.att.net would be the email address to send a text message to (510) 555-1234 on AT&T. Some carriers may have more than one gateway email address. Contact your mobile carrier for more information on your phone’s gateway email address.

Perform the following steps to configure the SSD Dashboard to send notification alerts:

**STEP 1: Go To Email Alerts Section**

Go to **Settings** and click on **Email Alerts** on the left hand navigation pane.

![Figure 44: Email & Text Alerts](image_url)
STEP 2: Review the Privacy Statement and EULA

Review the Privacy Statement and End User License Agreement displayed and then check the checkbox to receive alerts via email from SanDisk when the SSD Dashboard requires your attention.

![SanDisk SSD Dashboard](Image)

Figure 45: Enable Email/Text Alerts

STEP 3: Enter Your Email Address or Text Address

Enter your email address and then click on the Subscribe button. Optionally, you can click on the Sign up for SanDisk news and promotions link to receive those notifications as well.

To send the alerts as text messages to your mobile phone, use the appropriate text gateway email address for your mobile carrier. Some examples are:

- AT&T: 5105551234@mms.att.net
- Verizon: 5105551234@vzwpix.com
- T-Mobile: 5105551234@tmomail.net

Figure 46: Alert Subscription Confirmation Dialog

An email confirmation will be sent, which will look similar to the following:

**From:** ssddashboard-noreply@sandisk.com [mailto:ssddashboard-noreply@sandisk.com]
**Sent:** Wednesday, April 01, 2015 8:00 AM
To: John Doe  
Subject: The SanDisk SSD Dashboard requires your attention!

Hello,

You have successfully configured the SanDisk SSD Dashboard to send you email alerts.

Thank you!
SanDisk

--

Please do not reply to this email. If you no longer want to receive email alerts, you may unsubscribe by un-selecting the checkboxes on the Settings - Email Alerts page in the SanDisk SSD Dashboard or Unsubscribe here. Please reference the SanDisk SSD Dashboard FAQs for more information. Please feel free to submit a support request to support@sandisk.com.

If instead you had set it up as a text notification, you should receive a text message on your phone confirming your subscription.

STEP 4: Advanced Alert Options

Once you have subscribed to alerts, you may modify the subscription options by clicking the Advanced Alert Options button.
Figure 48: Accessing Advanced Alert Options

A dialog will then appear where you can turn off/on notifications for:

- Application Updates
- Firmware Updates
- SSD capacity near full
- SSD temperature above normal
- SSD S.M.A.R.T. attribute alerts

7. Help

7.1 Online Support

The Online Support section contains links to the SanDisk SSD Support Page, User Forums, and the current version of this User Manual. In addition, it has links to Chat Live and Ask a Question, where interactive support may be found.

7.2 Disable eDrive

Disable eDrive will prevent Self-Encrypting Drives (SEDs) from being placed into eDrive mode when installing Windows 8 or higher. Simply plug in and select a USB drive with the dropdown list, then click on Create USB Drive. Then follow the instructions in the README.txt file under the SanDisk SSD Dashboard folder on the drive.
7.3 Generate Report

Click on the **Generate Report File** button to create and save a full system report, which can provide more detailed information required for certain support cases. The two files generated are: `SSD_Dashboard_Report.csv` and `SSD_Dashboard_Report_msinfo.txt`.

7.4 About SSD Dashboard

The About SSD Dashboard section contains the version number of the SanDisk SSD Dashboard currently being run, as well as links to the End User License Agreement (EULA), third party notices, and the SanDisk Privacy Statement.
