KAIN 200 AIMO

INFORMATION

Meet the ROCCAT Kain. The Kain represents the culmination of an exacting process in gaming mouse optimization. Every last detail was analyzed and refined in the pursuit of perfection. As well as its highly ergonomic shape and surface material, its entire build structure, inner workings and componentry were meticulously overhauled. Now you can game more precisely, comfortable and consistently than ever before with the Kain – a masterpiece in every sense of the word.

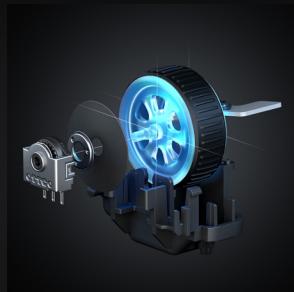

TITAN CLICK

Buttons are hinged and feature a low-tolerance spring that cushions every click. This gives exceptional precision with every press.

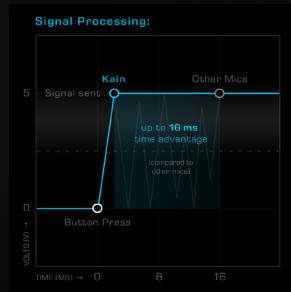

IMPROVED WHEEL

A mousewheel click is as solid as a normal click with the Titan Wheel 2.0. Its improved design provides defined and responsive scrolling steps.

INTELLIGENT FIRMWARE

A click with the Kain registers up to 16ms faster than the rest thanks to the improved switch mechanics and a smart firmware algorithm.

FEATURES

- ROCCAT® Owl-Eye Optical sensor with 16,000dpi
- Refined shape with high-comfort ergonomics
- Titan Click technology for exceptional click precision
- AIMO illumination - RGB Backlighting and LED lighting effects
- ROCCAT-exclusive Omron switches with 50 million click lifecycle

TECH SPECS

- ROCCAT® Owl-Eye Optical sensor with 16,000dpi
- 1,000Hz polling rate
- Distance Control Unit
- 512kB onboard memory
- 1.000mAh battery
- ARM Cortex-M0 48MHz
- 40g acceleration
- Angle snapping: on/off
- Light 110g weight
- Default DPI steps: 400, 800 (default), 1,200, 1,600, 3,200
