

Quick Start Guide

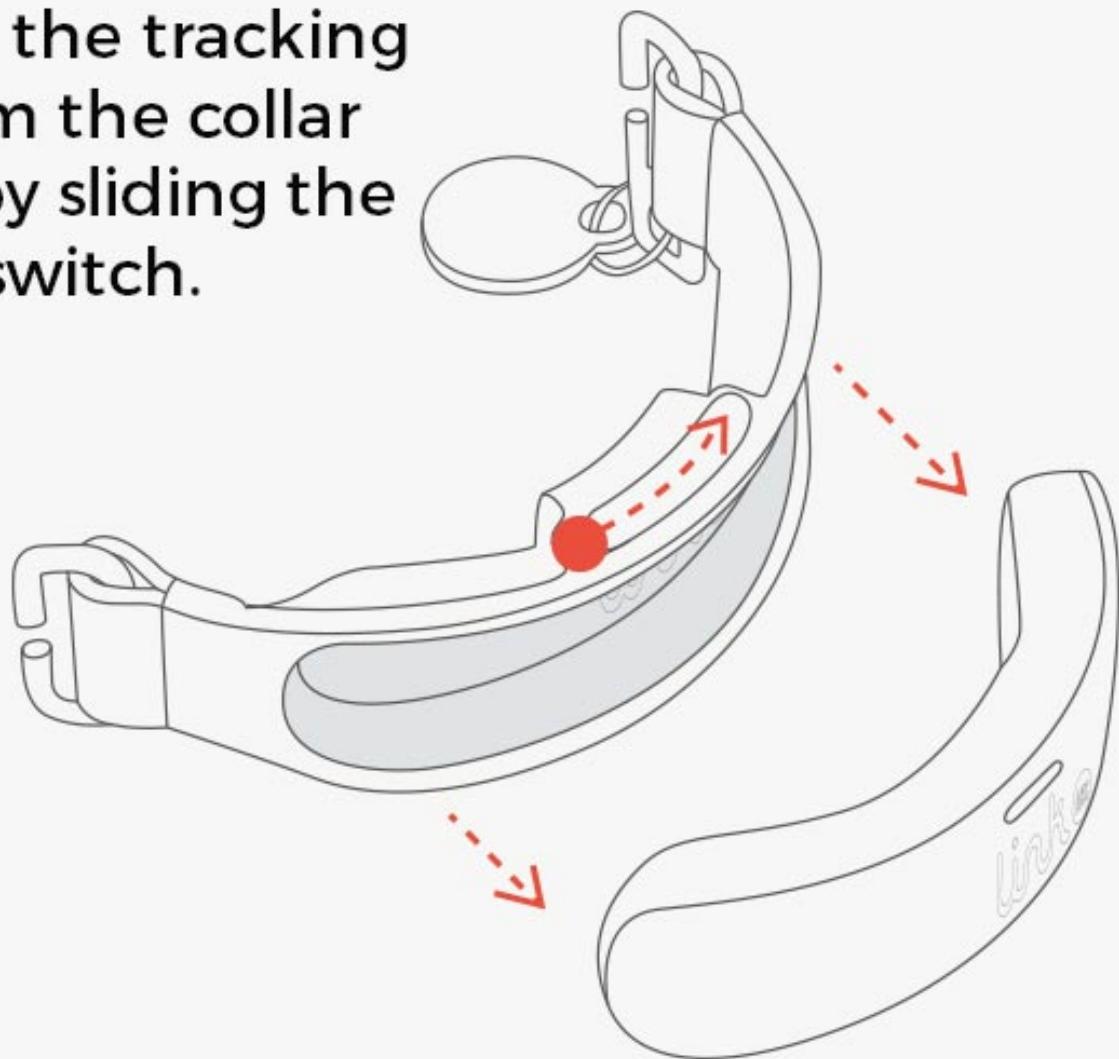

to the only dog collar you'll ever need.

Let's get started

Set up your collar

1

Remove the tracking unit from the collar carrier by sliding the release switch.

2

Look on the back of the tracking unit to identify the On/Off button.

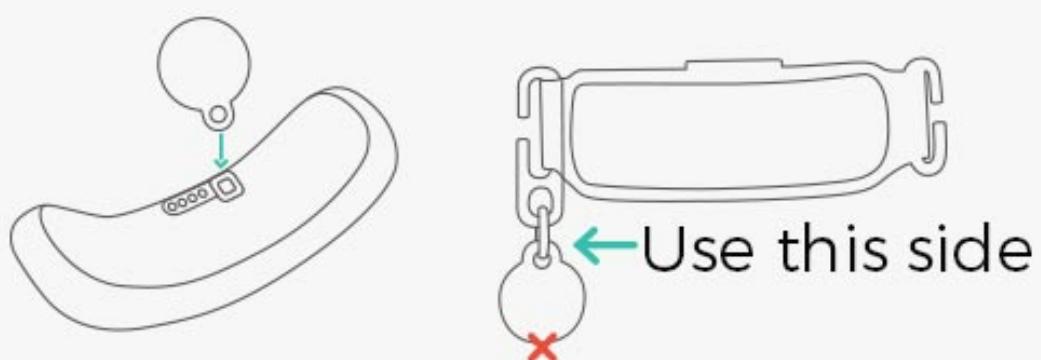

3

Push the On/Off button until you feel a click, on the release you will see a green light flash and hear a series of beeps to indicate ON.

 This button was designed to not be accidentally turned off; if you need help turning on, use the top of the collar's hang tag.

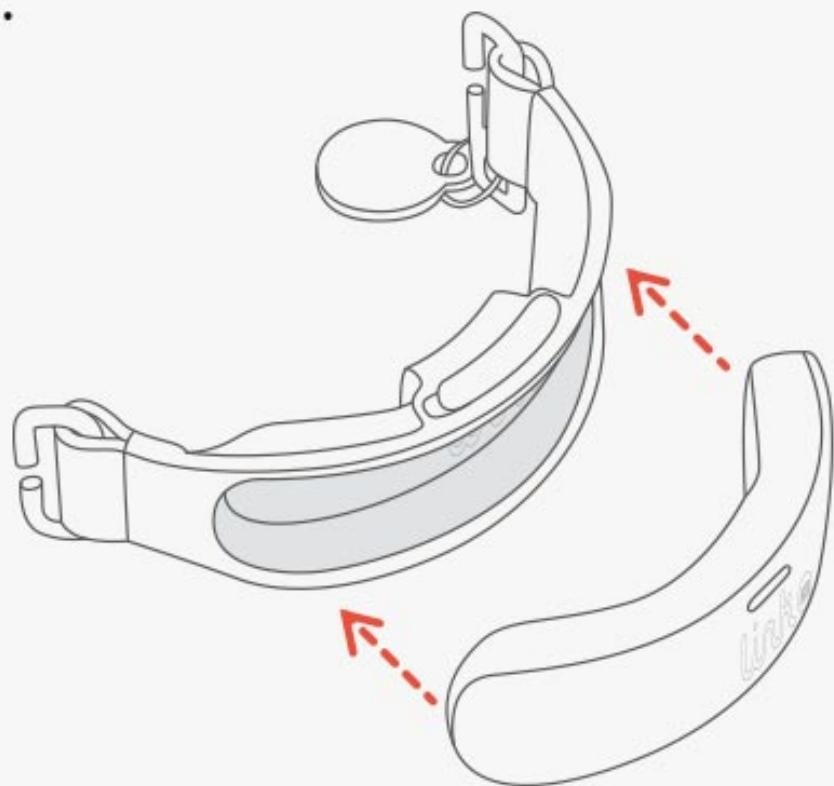

WARNING: Do not use a pen or other sharp object as you may damage your tracking unit.

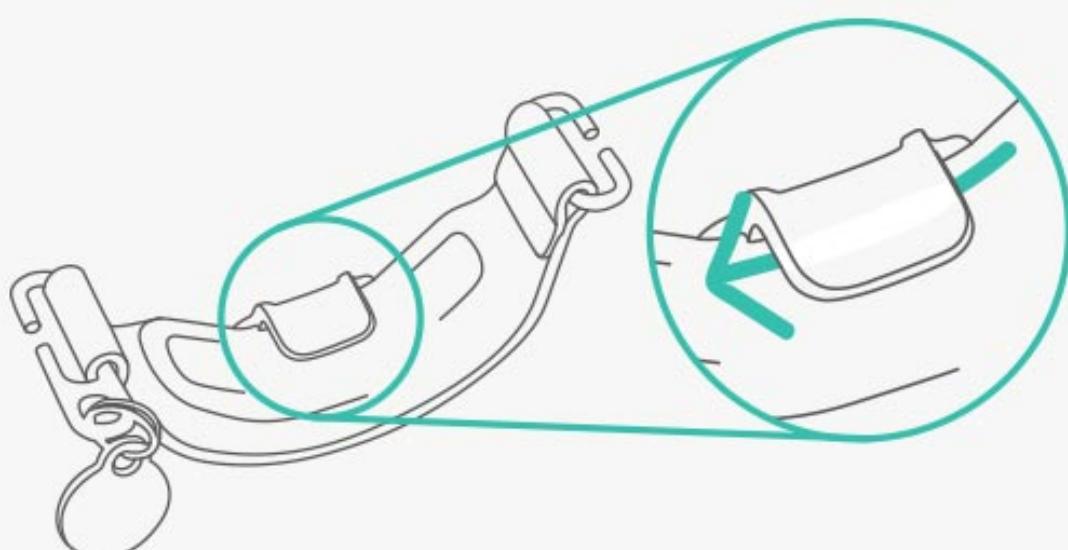

4

Place the tracking unit into the collar carrier. Feel and hear it click to know it's in place.

5

Thread your collar through the D-rings on the carrier and use the carrier clip to secure it in place.

6

Make sure that the collar isn't too loose or too tight when placed on your dog. You should be able to place two fingers between the dog and collar.

Remember to fully charge your Tracking Unit before actively using.

7

Download the app, turn on your phone's bluetooth, and have it near your LINK AKC smart collar.
