

NETGEAR
ARMOR

POWERED BY
Bitdefender

Advanced cyber threat protection
for your home and all your
devices.

Protect all devices connected to the Internet

NETGEAR Armor allows you to secure your smart phones, smart TVs, and all your other home appliances and gadgets, like WiFi thermostats, gaming consoles, and even your baby monitor. With NETGEAR Armor powered by Bitdefender you have the protection that automatically blocks access to phishing or fraudulent web pages and detect suspicious web and network traffic, on the network or for your devices when away from your network.

ANTIVIRUS

Stop cyber threats such as phishing, malicious URLs, and privacy attacks, before they strike.

PROTECTION LEVEL

Get reports on your overall protection level and tips on how to improve it.

COMPLETE SECURITY

Protect all your devices with Bitdefender Security at home and on-the-go.

MANAGEMENT APP

Get notified of any security vulnerabilities or threats detected on your network with the Nighthawk and Orbi app.

Learn How You Can Improve Your Protection Level

NETGEAR Armor calculates your level of protection based on the overall security of your router and connected devices. The higher the score, the better prepared your network is to defend against cyber threats. Based on your score, you'll receive personalized recommendations from Armor to teach you how to improve your Protection Level.

Get Armor While On-the-Go Powered by Bitdefender Security

Sit back, relax, and browse the Internet knowing you're secure wherever you go. Take this extra level of cybersecurity with you on all your daily ventures for Windows PC, MacOS, Android, and iOS devices. Install Bitdefender Security as part of your Armor subscription for on-the-go protection.

Better Security Features with the App

No matter where you enjoy streaming, gaming, and browsing on your devices, rest easy knowing you have:

- ✓ Anti-Theft: Remote device tracking
- ✓ Data Protection: Active anti-malware filter
- ✓ Anti-Phishing: Block suspicious websites
- ✓ Security Scan: Prevent and remove system threats
