

BOOST↑CHARGE™

Wireless Charging Stand 10W

A Qi™ certified wireless charging stand that provides safe, efficient, and consistent charging. This product is for anyone interested in purchasing a charging stand capable of fast wireless charging iPhone or Samsung devices for the first time. Charge up to nine watts for Samsung, 7.5 watts for iPhone, and standard five watts for all other wireless charging smartphones. Productivity is increased with the option of portrait or landscape viewing mode, allowing consumers to interact with their phones at the optimal viewing angle. Unclutter and simplify charging.

Use Cases

1. While charging at work, the optimized angle allows users to see alerts without interrupting work or removing the phone from the charging stand, maintaining a consistent charge.
2. Users place phone on charging stand while cooking so they can access recipes while charging. A video chat from family comes through and the user is able to accept the call without ever removing the phone from the stand, maintaining a charge.
3. People who sleep as little as four hours will wake to find their phone fully charged.
4. If users forget to put their phone onto the charging stand at night, they are able to get a charge while showering and getting ready.
5. People are able to use their phone as an alarm and nightstand clock while charging overnight.
