

What makes a lodge™ Solar Speaker 4 different?

“At lodge, we are delivering a unique solution to an age-old challenge. In the outdoor speaker category, customers have to choose and compromise between two options – Wired, installed speakers that can offer great sound but require complex, costly installation, OR small, portable speakers that are convenient but often lacking in sound quality, battery life, and connectivity. In developing the lodge Solar Speaker 4, we wanted to give customers a solution with no compromises. It is a wireless speaker that provides audiophile-level sound, that is built to be rugged and is easy to set-up and use.

It has game-changing features such as solar charging that keeps the speaker charged and ready to go all the time, a rugged, robust design that withstands the toughest weather conditions and Bluetooth™ 5.3 for smooth connectivity.

The lodge Solar Speaker 4 is the revolutionary offering in the audio market.”

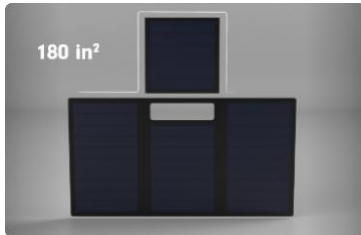

Sanjiv Lal – President, Lodge Outdoor

The lodge Solar Speaker 4 is the world's first weatherproof, audiophile-quality speaker powered by the sun
