

What is BD-Live?

BD-Live™ is a new Blu-ray feature on some discs that lets you access additional, movie-related material through an Internet connection. Using BD-Live, you may be able to download:

- Games
- Movie trailers
- Exclusive special features
- ...and more!

Note: Not all Blu-ray Discs have BD-Live-available content, and BD-Live content varies widely between discs. Look for Blu-ray Disc packaging with a BD-Live sticker or other indication that the disc supports BD-Live content.

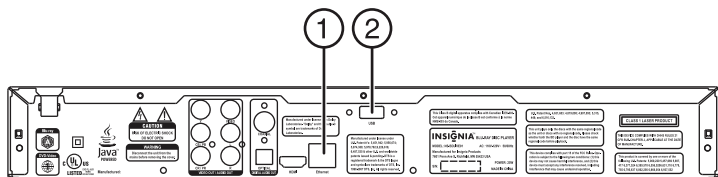

System requirements

- Broadband Internet access
- Ethernet cable network connection
- USB 2.0 flash drive (1 GB capacity or greater)
- BD-Live-capable Blu-ray Disc

Note: Disc must be in the player to gain access to BD-Live

Setting up the network connection

- 1 Using a computer on your network, verify that your Internet connection is currently running.
 - 2 Use an Ethernet cable (not included) to connect your Blu-ray player's **Ethernet** jack to a network hub, switch, or router. If your network is configured with **DHCP** set to **ON** and **DNS** set to **AUTO**, the player automatically detects the network settings. If you need help with this step, consult a computer network technician.
- Caution:** Don't connect a standard telephone cord to the Ethernet jack. Doing so does not provide network access and may damage your player.
- 3 Turn on your Blu-ray player.

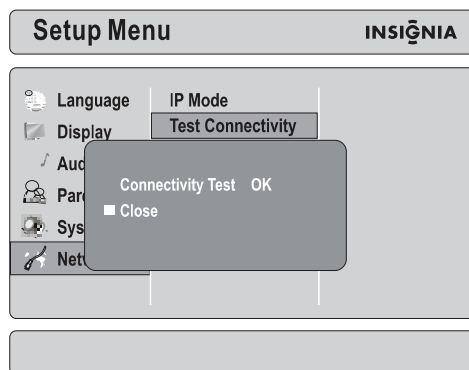

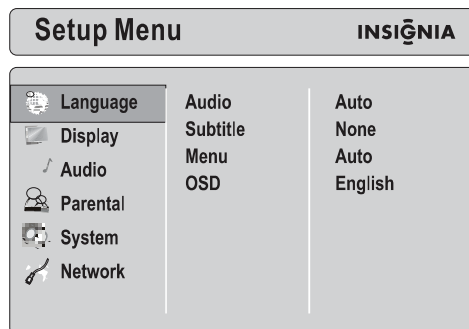

#	Item	Description
1	ETHERNET	Use this jack to connect your player to the Internet to download BD-Live information.
2	USB	Connect a USB drive to this jack.

Testing the Internet connection

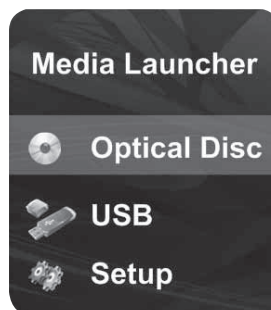

For help in setting up and testing a manual (non-DHCP) network connection, see your *User Guide*.

- 1 Press **SETUP**. The *Setup* menu opens.
- 2 Press **▲** or **▼** to highlight **Network**, then press **►** to move to the list of options.
- 3 Press **▲** or **▼** to highlight **Test Connectivity**, then press **ENTER**. Your player "pings" up to five servers or IP addresses to check for an Internet connection.
- 4 To stop the test, highlight **Close**, then press **ENTER**.

Connecting USB mass storage

- 1 Obtain a USB flash drive ("thumb drive") for storing BD-Live content.
- 2 To maximize space on the USB drive for BD-Live storage, you may want to delete other files already on the drive.
- 3 Connect the **USB** drive to the USB port on the back of your Blu-ray player. The *Media Launcher* menu opens.

- 4 Press **▲** or **▼** to highlight **USB**, then press **ENTER**. The *USB Function Select* menu opens.
- 5 Press **▲** or **▼** to highlight **BDLive Storage**, then press **ENTER**.

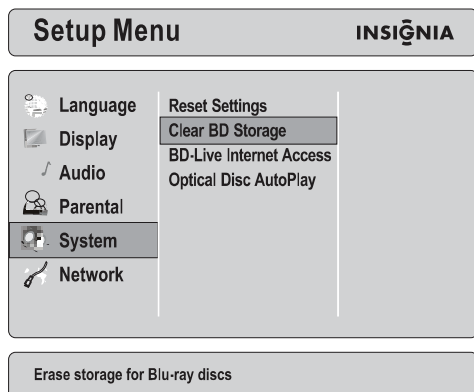

Using BD-Live

- 1 Insert a BD-Live-capable Blu-ray Disc into the Blu-ray player.
- 2 Open the disc's own BD-Live menu (usually under a *Bonus Materials* or *Special Features* menu), then choose from the available selections.
Note: The amount of BD-Live content that can be downloaded is dependent on the capacity of the attached USB drive.

Clearing BD-Live storage

If BD-Live downloads cannot complete, your BD-Live USB drive is probably full, and you need to delete its contents to make more space available. This can often be done through the BD-Live menus on the disc you are using, where you can delete specific content you have downloaded. Or, you can delete all of the content using the following steps:

- 1 Press **SETUP** on the remote control, press **▲** or **▼** to highlight **System**, then press **►** to move to the list of options.
- 2 Press **▲** or **▼** to highlight **Clear BD Storage**.

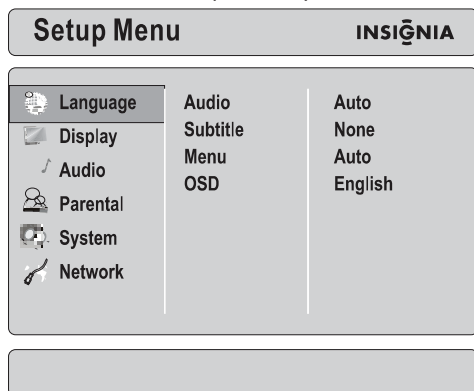

- 3 Press **ENTER**, highlight **OK**, then press **ENTER** again to close the message box.
- 4 Press **SETUP** to close the *Setup* menu.

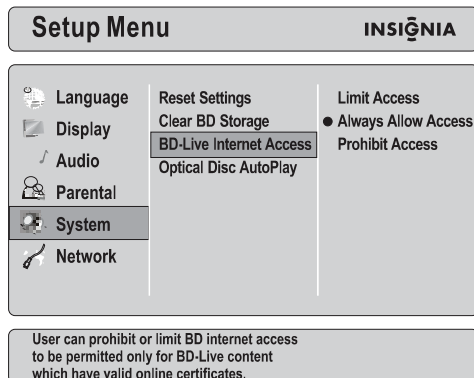

Setting your player's Internet access level

Note: This step is optional since default is *Always Allow*. For additional information, see your player's *User Guide*.

- 1 Press **SETUP**. The *Setup* menu opens.

- 2 Press **▲** or **▼** to highlight **System**, then press **►** to move to the list of options.

- 3 Press **▲** or **▼** to highlight **BD Live Internet Access**, then press **►**.
- 4 Press **▲** or **▼** to highlight an option. You can select:
 - **Limit Access**—Allows Internet access with valid BD-Live network access approval.
 - **Always Allow Access**—Always allows BD-Live Internet access.
 - **Prohibit Access**—Never allows BD-Live Internet access.
- 5 Press **SETUP** to close the *Setup* menu.

Troubleshooting

Problem	Solution
Cannot connect to the Internet	<ul style="list-style-type: none">• Make sure that the Internet connection is set up correctly. For more information, see your player's <i>User Guide</i>.• Test the Internet connection to make sure that it is working. For more information, see your player's <i>User Guide</i> or your computer's <i>User Guide</i>.• Make sure that the BD-Live Internet Access option is not set to Prohibit Access. For more information, see your <i>User Guide</i>.• Make sure that the disc you are playing is a legal copy.
After connecting to the Internet, cannot download a file	<ul style="list-style-type: none">• BD-Live storage may be full. Try clearing storage. For more information, see your <i>User Guide</i>.• Make sure that the Internet connection is still working. Try testing the connection. For more information, see your <i>User Guide</i>.• If you are using a USB drive, try a different drive.
File downloaded successfully, but playback pauses	<ul style="list-style-type: none">• Make sure that the USB drive is a 2.0 USB device. If the drive is a 1.1 USB device, pausing can occur.
