

ECHOMASTER

# POWER FILTER

## FOR ADDING A BACK-UP CAMERA

◆ FOR VEHICLES WITH REVERSE LIGHTS  
CONTROLLED BY PULSE WIDTH MODULATION

**CA-FLTR**

Many vehicles now use Pulse Width Modulation to alert the driver when a taillight is out - this affects the reverse light's power source which can result in poor back-up camera signal from an aftermarket camera.

EchoMaster's Power Filter stabilizes the signal from the reverse light to ensure that the camera provides a reliable signal.

### KEY FEATURES

- Easily connects to reverse light circuit and provides stable safety camera signal
- Eliminates need to run extra wires to power camera
- Easy add-on to back-up camera installation
- Works with any vehicle

### WHAT'S INCLUDED

- Power Filter
- User Manual

**Backed by a one year warranty**

**Safe driving starts here.**
