The H6PRO open acoustic gaming headset is the ultimate high-performance headset for gamers who want to stay in touch with their environment or who typically play in quiet surroundings. Its open-backed design provides an expansive, immersive soundstage with natural life-like audio. Gamers will be able to hear their own voice naturally, rather than via sidetone from microphone monitoring, and the additional ventilation also helps gamers keep a cool head in the heat of battle. A proprietary speaker system is tuned to deliver the highest possible realism and audio clarity, and factory checked to ensure accuracy in left-right balance. Gamers will hear every tiny cue, eliminate any chance of player miscommunication, and immerse themselves fully in the game.

The headset is the evolution of the acclaimed GSP 500 and GAME ONE open acoustic gaming headsets. The H6PRO is robust and durable, with reduced clamping force for comfort and an improved, slimmer, lightweight profile. Breathable, acoustically open foam ear pads and a 2-axis hinge design on the ear cups ensure a comfortable fit. The elongated lift-to-mute boom arm offers precise voice pickup; at the same time, its convenient magnetic attachment mechanism gives gamers the flexibility to remove the arm should they so choose, for example when streaming with a stand-alone microphone or playing a solo game.
