Clean Case

UV SANITIZING CHAMBER

Instruction Manual

Say Hello to a Beautiful Smile

Please take a moment to read these instructions thoroughly so that you can enjoy all the features your Dazzlepro Clean Case UV Sanitizing Chamber.

The Dazzlepro Clean Case harnesses the power of germicidal UV light to kill microorganisms, mold, fungi, and bacteria in just 10 minutes with no water, soaps, powders or chemicals needed.

This uniquely designed tray is perfect for cleaning mouth guards, retainers, night guards, whitening trays, dentures, and other dental devices leaving them sanitized and ready for use whenever you need them. Now you can enjoy clean devices with confidence, and that's something to smile about!

Getting Started

Inserting the Batteries

1. Turn the unit over and remove the battery cover.
2. Insert 2 AA alkaline batteries, being sure to position them correctly according to the polarity indicator. Replace the battery cover.
3. For best results, always use fresh batteries.

Cleaning the Unit

Use a soft, slightly damp cloth to wipe the outside and inside chamber of unit clean. Do not use harsh or abrasive chemicals or materials which may damage the unit or cause it to malfunction

Using the Clean Case

1. Rinse your dental device in water and pat dry to remove any residual build-up before sanitizing.
2. Open the lid and insert your device.
3. Close the lid completely then push the Power button on top of the lid to activate the sanitization process. The Power button will light up to indicate the sanitization process has begun.
4. Sanitization will automatically stop if the lid is opened at any time during the process. It is important to complete the sanitization process to insure that all microorganisms are destroyed.
5. The unit will shut off automatically after approximately 10 minutes when the sanitization process is complete. Open the lid and remove your device for immediate use, or store your device in the chamber to keep it clean for future use.
