With the Arlo Solar Panel connected to the camera and receiving average sun exposure, your camera battery stays charged, so you don't need to worry about recharging it. The solar panel is a great low-maintenance solution for outdoor camera installations in hard-to-reach areas.

Although the Arlo Solar Panel is designed to keep your Arlo camera battery fully charged, heavy usage of your camera can drain the camera battery faster than the solar panel can recharge it. The Arlo Solar Panel is designed to provide year-round trickle charging to keep your Arlo camera battery charged, not to charge your camera battery from low to full.
