

The Axis Rail HDTV Antenna is the first antenna to integrate seamlessly with your flat screen TV. It positions along the top of the TV, blending into the natural shape of the TV itself. The high-speed coaxial cable attaches behind the TV with no visible cables and delivers crisp, high-def video from 35-mile radius. The sleek, modern Rail HDTV Antenna is not only the best-looking antenna—it's also one of the highest quality antennas you can buy.

What's in the Box?
