

## Insignia NS-CH1XGO8 WiFi Smart Garage Controller Firmware Update Instructions

Your Insignia Garage Door Controller has been designed to take advantage of new features and updates via firmware files as they become available. These firmware updates are pushed to the garage controller via the Insignia cloud servers on a periodic basis.

You can check the current version of firmware on your unit via the Apple Home app's settings screen. Long press on the garage door icon to see below screens. The Firmware is shown at the bottom of the screen.

**NOTE:** If you currently have Firmware 2.6.3, a strong WiFi and are experiencing random issues with connectivity or 'No Response' from your controller, a firmware update will in most cases resolve the issue.

### How to Request Firmware Updates:

Simply call the Insignia Support team at: **877-467-4289** or [E-mail our support team](#)
