

SPXRGB5D 5M Dynamic LED Roll
SPXRGBCD Dynamic LED controller
BT and RF

SPXRGB5D

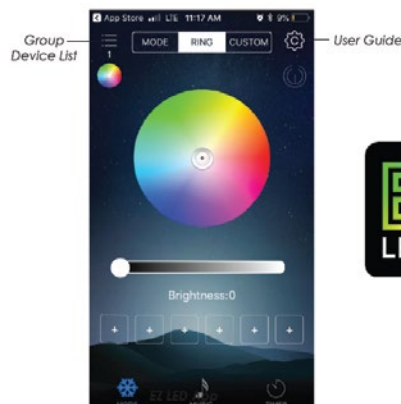

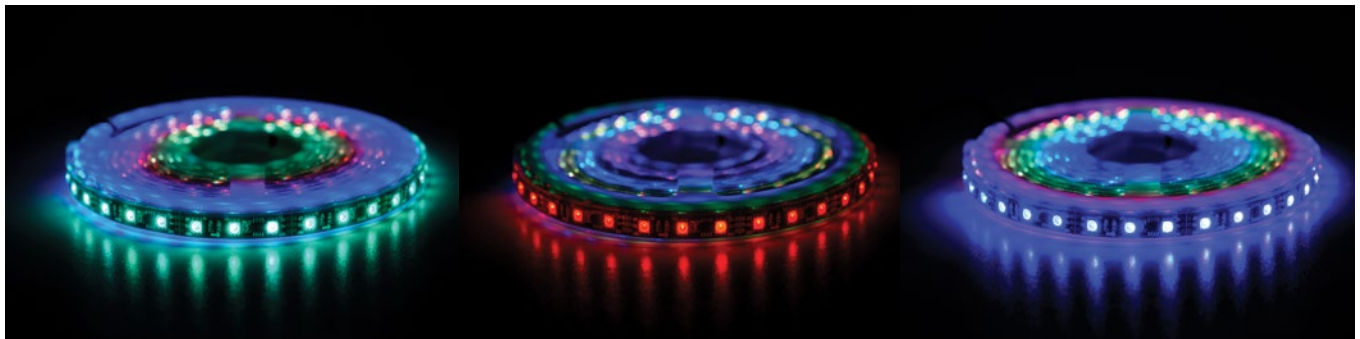

Stinger lights up your water-based fun with its new Marine Grade LED strip lights, adding UV, salt and fog durability to its already well-received line of strip lights.

The new model is fully dynamic, allowing users complete customization of patterns, sequences, colors and brightness for dynamic light shows in their boats, vehicles hot tubs, or pools. In addition, Stinger RF and Bluetooth controllers (sold separate) make customization of its dynamic lighting options accessible and easy to handle.

Thick weatherproof covering make these ideal for marine, powersports, RV or any application that needs to withstand the elements.

The 5 meter (16.4ft) roll can be cut to length every 2 inches and has 3M adhesive backing to stay in place.

Required for installation and to control up to 20M of SPXRGB5D Dynamic lighting with the Bluetooth or RF SPXRGBCD module. With 4 outputs and and iOS or Andriod app to create that dynamic light show you desire.
