## 1. Introduction

The USBG-7DU2 7-Port USB 2.0 Hub provides unique features to work in the bus-powered mode without an external AC power adapter, it also features an external 2-pin Terminal Block Connector for self-powered mode. The High-Speed 7-port USB 2.0 hub provides an ideal solution to expand 7 USB 2.0 ports from one single USB 2.0 host port. It provides a self power source (+7~24VDC from 2-pin Terminal Blocks) to provide enough power on USB 2.0 buses.

## 1.2 Connector Layout

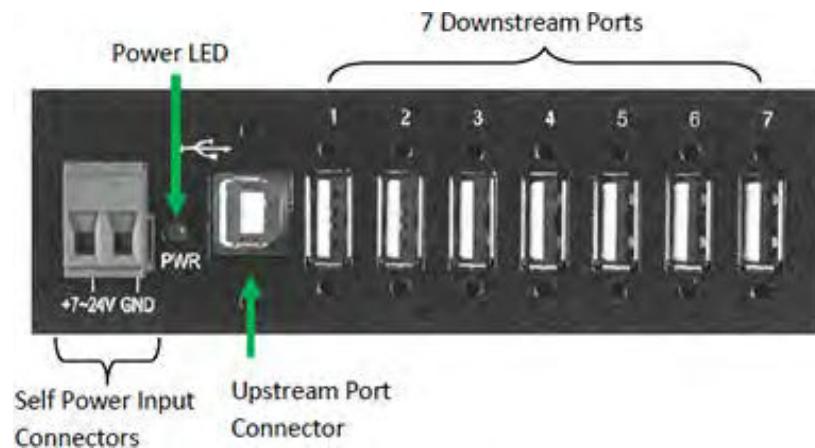

Figure 1

Upstream Port Connector	Self Power Input Connector
Type-B connector from upstream USB 2.0 port. It is connected from host or another USB 2.0 hub.	This 2-pin (one pin plus voltage and the other pin is ground) terminal block connectors are used to connect strong power to self-power the hub, the voltage can be in the range from +7V to 24VDC.

## 1.3 Hardware Installation

1. **Use static electricity discharge precautions.** Remove possible static discharge potential from any objects that the hub may come in contact with before installation. This can be accomplished by touching a bare metal chassis rail after you have turned off the power.
2. **Apply DC power (range from +7V to 24V) to the 2-pin Terminal Block Connector.** The hub is bus-powered by the upstream USB port; this terminal block connector is to add power to ensure enough power for the 4 downstream ports.
3. **Connecting USB Host cable:** The host cable is a standard A-to-B USB 2.0 cable. Please connect the type-A end connector of the cable to your upstream USB port, then connect the type-B end connector to this hub. Since the USB hub is plug-and-play, you don't have to turn off your host computer when installing the hub.
4. **Connect the USB Devices to the downstream ports of this hub.**
5. **Mount your hub on the wall or DIN RAIL if required.**

## 2. Notes, Tips, Warnings, and Safety

**Note**

In some cases, you will see an error message said that the USB Hub caused the USB bus power over the current limit, please ignore this message since the hub is hot plug and its power capacitor will cause a very short period of current. It will NOT affect your USB function.

**Warning**

Please make sure the polarity of the input power should be correctly match the terminal block pins, otherwise it will damage the hub.
