Halo White

ACTIVE TEETH
WHITENING SYSTEM

Your Halo White System

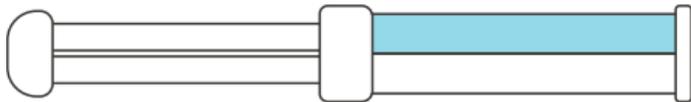

This Dazzlepro whitening system comes with professional-grade components and ingredients to help you whiten with ease.

- 2 - Dual-Barrel Active Whitening Syringes
- 6 - Disposable Mix Tips
- 1 - Silicone Mouthpiece
- 1 - Case for the Silicone Mouthpiece

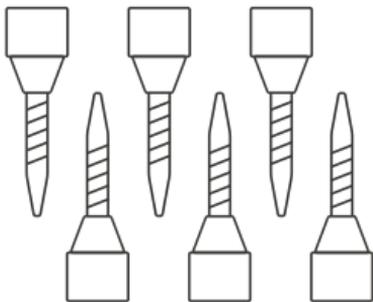

The Whitening Experience

With most whitening formulas, you will experience a light tingle or burn on your gums during the process. Don't worry this is common and means that it's working. Our solution also contains a Desensitizing Agent, Potassium Nitrate, to reduce potential teeth sensitivity.

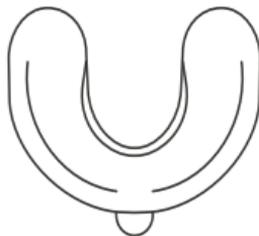

Note: If you experience extreme painful burning, immediately stop your treatment and contact your dentist if the burning persists.

Dual-Barrel Active
Whitening Syringe

Disposable Mix Tips

Silicone Mouthpiece

How to Use

1. To begin, attach a Mix Tip to the Dual Barrel Syringe. Make sure it is secured properly to avoid leakage during application.
2. Apply 1/6 of the contents of the syringe to the inner ridge of the Silicone Mouthpiece. Then, flip the mouthpiece upside down to fill the other side with another 1/6 of the syringe. This way, the solution will be effectively reaching your upper and lower teeth simultaneously.
3. Once both sides are filled, place the mouthpiece in your mouth and bite down gently. Leave in for at least 15 minutes to complete the whitening treatment.
4. For best results, use your Halo White Dual-Barrel Whitening System for 6 consecutive days, once a day. For maintenance whitening, use it every 4-6 weeks.
