SWITCHHUB

SPXSH440 4-CHANNEL 100 AMP SOLID-STATE RELAY

SwitchHUB is a solid-state, high current relay block with 4 independent outputs. One 40A and three 20A outputs, for a combined total of 100A continuous. Each output can be independently triggered by either a positive or negative trigger and those outputs can be combined for even more amperage capability. Each output has a thermal overload, and short circuit protection along with LED status indicators for the Thermal/Overload, Active/Inactive status. SwitchHUB eliminates the clutter of multiple high current relays and the accompanying wiring.

IPX/6 RATED
CORROSION RESISTANT TERMINALS / ELEMENT RESISTANT HOUSING

SPXM1 Multimedia Player
is **SWITCHHUB** ready

Want more control?
Add an SPXM1 multimedia player to your favorite marine or powersports vehicle and control the SwitchHUB with the on-board accessory control interface.
