

Designed with smartphonographers in mind, the **Wavo Mobile microphone** brings storytelling to the next level.

This **lightweight**, on-camera microphone improves sound quality without weighing down your rig. It is intuitive, easy to use and doesn't require a battery. All you need to do is connect one of the two included cables (TRS for camera or TRRS for smartphone) and you're ready to vlog.

The microphone has a **directional pattern** (cardioid) that captures sound from the front, making your voice crisper and clearer even in crowded places.

The Wavo Mobile advances the sound quality of your videos by using best in class **Rycote Lyre technology** which provides superior shock isolation and decreases additional noise.

The Wavo Mobile also includes a **deadcat cover** that greatly reduces unwanted noise from wind caused by breezes, fans or vents.

To secure Wavo Mobile on your rig, clamp or camera, just slide it through the **cold shoe mount** and rotate it clockwise till it's firmly locked. Then, warm up your voice and start recording!
